<u>Chapter I: The Axioms</u>	1
I.1 Enumeration of the Axioms I-XIII. Remarks.	
I.2 Interpretation of the axioms.	
<u>Chapter II: Geometrical character of L and the ring \mathcal{R}</u>	8
II.1 Verification that L fulfills the Axioms I ^o -VI ^o of a discrete (projective) or continuous geometry.	
II.2 Introduction of the ring \mathcal{R} (Theorem I, Assumption Δ).	
<u>Chapter III: Unitary transformations</u>	23
III.1 Elementary properties.	
III.2 $P(1,a) = D(a)$. The first transitivity Lemma. (Theorem II).	
III.3 Partial unitarity. Transitivity properties. (Theorem III).	
Appendix III Elimination of Axiom XIII ₁ for $L = L_{\infty}$.	
Appendix III' Simultaneous observability (Theorems I _b , II _b).	
<u>Chapter IV: Definiteness</u>	41
IV.1 Orthogonal systems and the Hermitian matrix scheme. (Theorems IV, V).	
IV.2 Definiteness (Theorem VI).	
IV.3 The characteristic ρ_0 of Z is 0 (Theorem VII).	
IV.4 The relations $x < y$ and $\ x\ \leq k$, and the notion of boundedness (Theorems VIII, IX, X).	
IV.5 Functional calculus (First part).	
<u>Chapter V: Real traces</u>	67
V.1 Definition of the real trace: $t(xy) = t(yx)$, $t(g) = R(g)$ for h. ip. g..	

V.2 Extension properties of the real trace (Theorem XI).

V.3 The trace metric (Theorem XII).

V.4 Approximations.

Chapter VI: Real traces and transition probabilities

84

VI.1 $P(a,b) = \frac{D(b)}{D(a)}$ for $b \leq a$. The quantities $\pi_h(a,b)$, $h = 1, 2$

(Theorem XIII).

VI.2 The function $\tau(x)$ with $\tau(fgf) = \pi_h((f)_r, (g)_r)$.

VI.3 The real trace $\bar{t}(x)$ in \mathfrak{R} with $\bar{t}(fg) = \pi_h((f)_r, (g)_r)$ (First part).

VI.4 The real trace $\bar{t}(x)$ in \mathfrak{R} with $\bar{t}(fg) = \pi_h((f)_r, (g)_r)$ (Second part) (Theorem XIV).

Chapter VII: Completeness properties. Uniqueness of the real trace.

The center

106

VII.1 Completeness properties (Theorem XV).

VII.2 Functional calculus (Second part) (Theorem XVI).

VII.3 Spectral decomposition (Theorems XVII, XVIII).

VII.4 Uniqueness of the real trace (Theorems XIX, XX).

VII.5 Determination of the center (Theorem XXI).

Chapter VIII: The operatorial description in a unitary space

136

VIII.1 Construction of the unitary space \mathfrak{H} (Theorems XXII, XXIII).

VIII.2 The operators R_U, L_U, C in \mathfrak{H} .

VIII.3 Properties of the $R_U, L_U, \tilde{R}_U, \tilde{L}_U$.

VIII.4 The rings $\mathfrak{m}, \mathfrak{n}$ (Theorem XXIV).

VIII.5 The systems $\mathfrak{u}(\mathfrak{m}), \mathfrak{u}(\mathfrak{n})$ (Theorems XXV, XXVI, XXVII).

VIII.6 m, n as factors (Theorem XXVIII).

Appendix VIII The discrete cases L_N , $N = 4, 5, \dots$ (Theorems I_C, II_C).

Chapter IX: Construction of all systems L

189

IX.1 Rings of operators in a unitary space.

Appendix IX, added February 1980 by Israel Halperin

Appendix IX₁ The L which satisfy Axioms I-XIII and Assumption Δ , are precisely all projection geometries of factors in Case (I_N) , $N = 4, 5, \dots$, or in Case (II_1) , up to (\langle, \perp, P) isomorphisms (Theorem I_d).

Appendix IX₂ Von Neumann's stronger Axiom IX_0 gives just those L which are (\langle, \perp, P) isomorphic to projection geometries of factors in Case (I_N) , $N = 4, 5, \dots$ (Theorem II_d).

Appendix IX₃ Axiom X is superfluous.

Appendix IX₄ Operator algebra isomorphism and (\langle, \perp, P) isomorphism (Theorem III_d).

Appendix IX₅ Normal form for the discrete $L(m)$, m in Case (I_N) , $N = 4, 5, \dots$.
