

Contents

Preface	vi
Nomenclature	xi
Chapter 1 Fundamentals	
1.1 Introduction	1
1.2 Notation and summation convention	1
1.3 Definition of a tensor	5
1.4 Tensor algebra	6
1.5 Tensor calculus	8
1.6 The unity and alternating tensors	10
1.7 Problems	13
Chapter 2 Continuum mechanics	
2.1 Isotropic tensors as material properties	15
2.2 Isotropic tensor forms	16
2.3 Linear expansions and physical laws	19
2.4 Symmetry and antisymmetry	20
2.5 Principal axes	22
2.6 The strain and vorticity tensors	23
2.7 The stress tensor	26
2.8 Relationship between stress and strain	28
2.9 Deformation of solids	31
2.10 Problems	32

Chapter 3 Transport processes

3.1	General transport equations of fluid media	33
3.2	Heat, mass and momentum transfer	36
3.3	Transport in particulate media	45
3.4	Thermodynamic relations	50
3.5	Turbulent transport	55
3.6	Electrical phenomena	57
3.7	Biological phenomena	60
3.8	Problems	63

Chapter 4 Field theory

4.1	Introduction	65
4.2	Potential fields	65
4.3	The electromagnetic field	69
4.4	The acoustic field	75

Chapter 5 Tensors in generalised coordinates

5.1	Coordinate systems and transformations	79
5.2	Contravariant, covariant and mixed tensor forms	82
5.3	Tensor algebra	84
5.4	The metric tensor	86
5.5	The Christoffel symbols	91
5.6	Covariant differentiation	95
5.7	The alternating tensors	99
5.8	Equations in three-dimensional curvilinear coordinates	100
5.9	Dynamics of particles and systems	106
5.10	Problems	110
