CONTENTS

PART 0 PRELIMINARIES

Chapter 0 Notations and Prerequisites
Numbers 1 □ Sets and maps 1 □ Equivalence relations 3

Chapter 1 Spaces and Continuous Maps
Introduction 5 □ Continuity 5 □ Homeomorphism 7 □ Neighborhoods, open and closed sets 11 □ Compactness 15

Chapter 2 Abelian Groups
Introduction 21 □ Definitions 21 □ Direct sums 23 □ Exact sequences 27 □ Free abelian groups 31

PART 1 INTRODUCTION TO HOMOTOPY THEORY

Chapter 3 Connected and Disconnected Spaces
Introduction 41 □ Connectedness 41 □ Path-connectedness 43 □ Local path-connectedness 45

Chapter 4 More about Connection
Introduction 49 □ The group $H^0(X)$ 49 □ The set $\pi_0(X)$ 50□ The group $H_0(X)$ 53

Chapter 5 Definition of Homotopy
Introduction 57 □ Definition of homotopy 57 □ Homotopy equivalence 60 □ Homotopy sets; the groups $H^1(X)$ 61

Chapter 6 A Study of a Circle
Introduction 65 □ Lifting maps from S^1 up to $\mathbf{R}$ 65 □ The degree of a map 68 □ Applications 70

Chapter 7 Lifting and Extension Problems
Introduction 74 □ The lifting problem 75 □ The extension problem 79

Chapter 8 Calculations
Introduction 84 □ The Mayer-Vietoris theorem 84 □ First calculations 87 □ Graphs 90 □ Products 91

PART 2 THE DUALITY THEOREM

Chapter 9 Eilenberg's Separation Criterion

Introduction 99 □ Complementary components 99 □ Separation of points by compact plane sets 100

Chapter 10 The Duality Map

Introduction 104 □ Construction of the duality map 104 □ Proof of injectivity 106

Chapter 11 Proof of the Duality Theorem

Introduction 111 □ An extension theorem 113 □ Naturality 116 □ Proof in some special cases 116 □ End of the proof 119

Chapter 12 Remarks on the Proof

Introduction 122 □ The extended plane 122 □ Reformulation of preceding chapters 124 □ The Hopf map 125

PART 3 FURTHER RESULTS IN THE TOPOLOGY OF PLANE SETS

Chapter 13 The Jordan Curve Theorem

Introduction 133 □ Theta curves 133 □ First alternative proof (after Dieudonné) 135 □ Point sets in $\mathbf{R}^n$ and S^n 137 □ Second alternative proof (after Doyle) 139 □ Invariance of (plane) domains 140

Chapter 14 Further Duality Properties

Introduction 143 □ The group $H_1(X)$ 143 □ Properties of $H_1(X)$ 146 □ Duality 147 □ Plane domains 148

Chapter 15 Geometric Integration Theory

Introduction 153 □ Line integrals in $\mathbf{R}^2$ 153 □ Green's theorem 154 □ Reformulation in terms of homology 157 □ The three-dimensional case 160 □ The complex case 162
