CHAPTER V.

LINEAR VECTOR FUNCTIONS. CENTRAL QUADRIC SURFACES.

53. Linear vector function. Dyadic. Dyads. Antecedents and consequents 54. Dyadics. Scalar multiplication. Prefactor and postfactor. Conjugate dyadics. 55. Distributive law for dyads. Nonion form of a dyadic. Theorem 56. Scalar and vector of a dyadic 57. Products of dyadics. Distributive and associative laws 58. The cross product Φ×r 59. The Idemfactor or Identical Dyadic 1 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r·(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Invariants of a self-conjugate dyadic 76. Tangent plane. Perpendicular from centre 77. Tangent plane. Conjugate diameters. Case of ellipsoid 78. Reciprocal quadric surfaces CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 79. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion		I. Dyadics.				
54. Dyadics. Scalar multiplication. Prefactor and postfactor. Conjugate dyadics 55. Distributive law for dyads. Nonion form of a dyadic. Theorem 56. Scalar and vector of a dyadic 57. Products of dyadics. Distributive and associative laws 58. The cross product Φ×r 59. The Idemfactor or Identical Dyadic I 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Invariants of a self-conjugate dyadic 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion	ART. 53.	Linear vector function. Dyadic. Dys	ads. A	nteceden	ts and	
jugate dyadics 55. Distributive law for dyads. Nonion form of a dyadic. Theorem 56. Scalar and vector of a dyadic 57. Products of dyadics. Distributive and associative laws 58. The cross product ♠xr 59. The Idemfactor or Identical Dyadic I 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Invariants of a self-conjugate dyadic 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion		consequents		•		. 1
55. Distributive law for dyads. Nonion form of a dyadic. Theorem 56. Scalar and vector of a dyadic 57. Products of dyadics. Distributive and associative laws 58. The cross product ♥×r 59. The Idemfactor or Identical Dyadic I 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Invariants of a self-conjugate dyadic 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical	54.		r and p	ostfacto	r. Con-	
56. Scalar and vector of a dyadic 57. Products of dyadics. Distributive and associative laws 58. The cross product Φ×r 59. The Idemfactor or Identical Dyadic I 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r•f•r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertis dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point.		jugate dyadics				
57. Products of dyadics. Distributive and associative laws 58. The cross product Φ×r 59. The Idemfactor or Identical Dyadic I 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r·(a×I) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r·Φ·r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point.			of a dyac	dic. The	orem .	
58. The cross product Φ×r 59. The Idemfactor or Identical Dyadic I 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r*(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r•f*r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration. 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point.	56 .	Scalar and vector of a dyadic				. :
59. The Idemfactor or Identical Dyadic I. 60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics. 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r••r= const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion				laws		
60. Reciprocal dyadics. Reciprocal of a product and of a power 61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r••r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion		•		•		
61. Conjugate dyadics. Conjugate of a product. Self-conjugate and anti-self-conjugate dyadics. 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r·(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r·•r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion						
anti-self-conjugate dyadics 62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r*(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 66. Equation of surface r*•r* = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion	60.	Reciprocal dyadics. Reciprocal of a produ	et and	or a powe	er .	
62. Resolution of a dyadic into self-conjugate and anti-self-conjugate parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic 11. Central Quadric Surfaces. 66. Equation of surface r•Φ•r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point.	61.				are and	
parts 63. The theorem r×a = r•(a×1) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic II. Central Quadric Surfaces. 66. Equation of surface r•Φ•r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point.	eo	anti-self-conjugate dyadies	ond o		mingate	
63. The theorem r×a = r·(a×I) 64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic II. Central Quadric Surfaces. 66. Equation of surface r·Φ·r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion	0Z.		, and a	101-8011-00	, injugar.	
64. Simple form for any self-conjugate dyadic 65. Invariants of a self-conjugate dyadic II. Central Quadric Surfaces. 66. Equation of surface r. f. = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters. Case of ellipsoid 71. Reciprocal quadric surfaces EXERCISES CHAPTER VI. THE RIGID BODY. INERTIA DYADIC. MOTION ABOUT A FIXED POINT. I. The Inertia Dyadic. 72. Moments and products of inertia 73. Theorem of parallel axes 74. Nonion form of the inertia dyadic 75. Momental ellipsoid and ellipsoid of gyration 76. Principal axes at any point. Binet's theorem II. Motion about a Fixed Point. 77. Kinematical 78. Equation of motion	49	•	• •	•	•	•
II. Central Quadric Surfaces. 66. Equation of surface r-4-r = const. 67. Tangent plane. Perpendicular from centre 68. Condition of tangency 69. Polar plane 70. Diametral plane. Conjugate diameters.
