

CONTENTS

Preface *v*

Chapter 1 The Axiomatic Method 1

- 1.1 Introduction 1
- 1.2 Inductive and Deductive Reasoning 2
- 1.3 Axiomatic Systems 8
- 1.4 Consistency 13
- 1.5 Independence 19
- 1.6 Completeness and Categoricalness 22
- 1.7 Finite Geometries 28

Chapter 2 Euclidean Geometry 38

- 2.1 Introduction 38
- 2.2 A Brief Critique of Euclid 39
- 2.3 The Postulates of Connection 46
- 2.4 The Measurement of Distance 51
- 2.5 Order Relations 56
- 2.6 Angles and Angle Measurement 68
- 2.7 Further Properties of Angles 74
- 2.8 Triangles and Polygons 82
- 2.9 The Congruence Postulate 86
- 2.10 The Parallel Postulate 92
- 2.11 Further Properties of Triangles 99
- 2.12 Similarity 108
- 2.13 The Pythagorean Theorem 118
- 2.14 The Measurement of Area 120
- 2.15 Lines and Planes in Space 125
- 2.16 Circles 138

Chapter 3	
The Geometry of Four Dimensions	
	163
3.1	Introduction <i>163</i>
3.2	The Postulates of Four-dimensional Euclidean Geometry <i>166</i>
3.3	Connection Theorems <i>174</i>
3.4	Parallel Relations in E_4 <i>182</i>
3.5	Perpendicularity Relations in E_4 <i>192</i>
3.6	Relations Involving Both Perpendicularity and Parallelism in E_4 <i>200</i>

Chapter 4	
Plane Hyperbolic Geometry	
	207
4.1	Introduction <i>207</i>
4.2	The Parallel Postulate for Hyperbolic Geometry <i>209</i>
4.3	Asymptotic Triangles <i>223</i>
4.4	Saccheri Quadrilaterals <i>231</i>
4.5	The Angle-sum Theorem <i>236</i>
4.6	Further Properties of Parallel Lines <i>247</i>
4.7	Corresponding Points and Related Loci <i>257</i>
4.8	Defect and Area <i>270</i>
4.9	Numerical Relations in Right Triangles <i>278</i>
4.10	Numerical Relations in Lambert Quadrilaterals <i>282</i>

Chapter 5	
A Euclidean Model of the Hyperbolic Plane	
	290
5.1	The Description of the Model <i>290</i>
5.2	The Measurement of Distance <i>293</i>
5.3	The Measurement of Angles <i>305</i>
5.4	Triangles in H_2 <i>317</i>
5.5	Summary <i>327</i>
