TABLE OF CONTENTS

Introduction V

Chapter I Motivation and a historical survey 1

1. "Delooping" via the classifying space construction 2
2. A_∞-spaces 4
3. A_∞-maps 8
4. A different approach 13
5. Some remarks on commutativity 23

Chapter II Topological-algebraic theories 27

1. Definitions 27
2. Free theories 31
3. Interchange 40
4. Free $\mathcal{C}$-spaces and triples 48
5. Spines 57
6. Examples of PROs and PROPs 64
7. Partly homogeneous theories 68

Chapter III The bar construction for theories 72

1. The theory $W\mathcal{C}$ 72
2. A filtration of $W\mathcal{B}$ for PROs and PROPs 76
3. Lifting theorems 83

Chapter IV Homotopy homomorphisms 95

1. Maps between $W\mathcal{B}$-spaces 95
2. Composition and the homotopy category 100
3. Homotopy invariance and homotopy equivalences 109
4. Relating $\mathcal{B}$-maps and $n\mathcal{B}$-maps to $W\mathcal{B}$-homomorphisms .. 120
5. Maps from $W\mathcal{B}$-spaces to $\mathcal{B}$-spaces 126
6. An equivalence of categories 140
7. Homotopy invariance for general theories 145

Chapter V Structures on based spaces 155
1. Based theories 155
2. Based PROs and PROPs 157
3. The based bar construction 158
4. Lifting and extension theorems 163
5. Based homotopy homomorphisms 167
6. The based construction M 171

Chapter VI Iterated loop spaces and actions on classifying spaces 174
1. The classifying space construction 174
2. Actions on the classifying space 189
3. n-fold and infinite loop spaces 193
4. Homotopy-everything H-spaces, Dyer-Lashof operations 201
5. Examples of infinite loop spaces 207

Chapter VII Homotopy colimits 218
1. Homotopy diagrams 218
2. Homotopy colimits 219
3. Spectral sequences for homotopy colimits 221
4. Homotopy colimits of coverings 223

Appendix 228
1. Compactly generated spaces 228
2. Equivariant cofibrations 231
3. Numerable principal G-spaces 239
4. Filtered spaces and iterated adjunction spaces 244
