CONTENTS

Chapter I. Introduction to Semisimple Theory 1

A. Basic Structure 1

B. Various Series of Representations 16

1. Principal : minimal parabolic 16

2. Discrete 23

3. Principal : cuspidal parabolic 27

4. Complementary 31

5. Degenerate 33

C. Characters and the Plancherel Formula 34

Chapter II. Results on Induced Representations 45

A. Ancient Results of Mackey 45

1. Subgroup theorem 45

2. Tensor product theorem 49

3. Intertwining number theorem - Frobenius reciprocity 52

4. Mackey and Anh reciprocity 55

B. Applications to Semisimple Groups 61

Chapter III. Representations of Group Extensions 67

A. Semidirect Products with Abelian Groups 67

B. The General Case 74

Chapter IV. Nilpotent Groups 87

A. The Orbit Theory of Kirillov 87

B. Characters and the Plancherel Formula 98

Chapter V. Representations of Algebraic Groups 106

A. Structure of Algebraic Groups in Characteristic Zero 106

B. Representations of Semisimple p-adic Groups 118

C. Representations of Unipotent p-adic Groups 126

D. Algebraic Groups as Group Extensions 128

E. CCR Property for Algebraic Groups 137

Chapter VI. Solvable Groups - A Short Summary 141

A. Lie Groups 141

B. p-adic Groups 148

Appendix 150

A. Induced Representations 150

B. The Imprimitivity Theorem 155

Notation and Terminology 157

Bibliography 160
