

# TABLE OF CONTENTS

CHAPTER	PAGE
I. INTRODUCTION	1
II. COMPLEX STRUCTURES ON VECTOR SPACES	6
Complexification of a Real Vector Space	
Complex Structure	
The Relation between Complexification and Complex Structure	
Conjugate Complex Structure	
Complexification of the Dual Space	
Expressions in Terms of Bases	
Orientations	
III. COMPLEX MANIFOLDS	21
Manifolds	
Complex Structures	
Necessary Conditions for a Complex Structure to Exist	
Examples of Complex Manifolds	
The Conjugate Manifold	
The Product Manifold	
The Real Subspace	
Functions and Analytic Continuation	
IV. VECTORS AND TENSORS ON A COMPLEX MANIFOLD	39
The Tangent Space and the Cotangent Space	
The Complexified Tangent Space	
Complex Structure on the Tangent Space	
Complex Structure on the Cotangent Space	
Relation Between the Canonical Complex Structure and the Manifold Complex Structure	
Vectors and Tensors	
Real Tensors	
Vectors and One-Forms of Type $(1,0)$ and Type $(0,1)$	
Complex Tensors and Complex Manifolds	
Tensor Fields	
Analytic Continuation of Tensors	
The Exterior Derivative Operator $d$	
The Operators $\partial$ and $\bar{\partial}$	
The Dolbeault-Grothendieck Lemma	

## TABLE OF CONTENTS

CHAPTER	PAGE
V. ALMOST COMPLEX MANIFOLDS	72
Almost Complex Structure	
Conditions for Existence of an Almost Complex Structure	
Almost Complex Structure on a Complex Manifold	
The Nijenhuis Tensor	
Vanishing of the Nijenhuis Tensor as Necessary and Sufficient Condition for Integrability	
Relaxation of Differentiability Requirements on J and Integrable Almost Complex Manifolds	
VI. HERMITIAN AND KÄHLERIAN MANIFOLDS	89
Hermitian Structures on Vector Spaces	
Hermitian Manifolds	
Kählerian Manifolds	
Conformally Kählerian Manifolds	
Differential Geometry on Hermitian and Kählerian Manifolds	
Curvature on Kählerian Manifolds	
Recapitulation	
VII. REVIEW OF GENERAL RELATIVITY	120
General Relativistic Interpretation of Differential Geometry	
Newman-Penrose Formalism	
Lorentz Transformations	
Geometric Meaning of the Spin Coefficients	
Surface and Hypersurface Orthogonality	
Algebraic Classification of Fields	
Type D Spacetimes	
Kerr-Schild Spacetimes	
Conformal Geometry	
Constants of Motion	
Spinors	
VIII. STRUCTURES ON SPACETIME MANIFOLDS	176
A Genuine Almost Complex Structure for Spacetimes	
Necessity for Complex Valued Almost Complex Structure Tensor	
The Modified Almost Hermitian Structure	
Modified Integrability Considerations	

## TABLE OF CONTENTS

CHAPTER	PAGE
Generalized Reality Conditions and the Product Manifold as the Complex Extension Modified Complex Analysis The Integrability Conditions $\kappa = \sigma = \nu = \lambda = 0$ Example: Structure Coordinates for Schwarzschild and Kerr Spacetimes Modified Kählerian Spacetimes Duality and Almost Hermitian Structure	
IX. KÄHLERIAN SPACETIMES	211
Complex Lorentz Transformations, Complex Null Tetrads, and Complex Metrics Derivation of the Real Kählerian Spacetimes Structure of the Real Kählerian Spacetimes Symmetries in Real Kählerian Spacetimes Left-Kählerian Spacetimes Zero Rest Mass Free Fields Solutions on Left-Kählerian Spacetimes Geroch-Held-Penrose Formalism	
X. COMPLEX TRANSFORMATIONS	254
Generation of Twist Generation of Twist in Minkowski Space Newman's Complex Transformations "Explanations" of the Newman Transformations Analytic Complex Transformations Non-Analytic Complex Transformations The "Heavenly Explanation"	
XI. TWISTOR THEORY AND HEAVENLY SPACETIMES	292
Twistors for Minkowski Space Twistor Physics Analytic Metrics, Twistor Surfaces, and Kerr's Theorem Curved-Space Twistors Heavenly Spacetimes	
XII. DISCUSSION	345
