Table of Contents

Part I. General Algebraic Theory

Chapter I. Elliptic Functions 3

§ 1. The Liouville Theorems 3
§ 2. The Weierstrass Function 6
§ 3. The Addition Theorem 10
§ 4. Endomorphisms, Automorphisms, and Isomorphisms 13
§ 5. Points of Finite Order 17
§ 6. The Sigma and Zeta Function 19
§ 7. The Klein Form and the Siegel-Néron Function 23
§ 8. q-Expansions and Products 26

Chapter II. The Division Equation 33

§ 1. The Division Polynomial 33
§ 2. The Algebraic Formulas Over $\mathbf{Z}$ 37
§ 3. Estimates for the Coefficients 43

Chapter III. p-Adic Addition 47

§ 1. Addition Near the Origin 48
§ 2. The Lutz–Nagell Theorem 54
§ 3. The Formal Group 55
§ 4. The Néron Function 62
§ 5. The Tate Curve 68
§ 6. p-Adic Points of Order p 73

Chapter IV. Heights 77

§ 1. Basic Properties 77
§ 2. The Infinite Descent and Mordell–Weil Theorem 84
§ 3. Quasi-Linear Algebra 85
§ 4. Quadraticity of the Height 88
§ 5. Linear Dependence of Algebraic Points 93
§ 6. Local Decomposition of the Height 98

Chapter V. Kummer Theory 101

§ 1. $A_K/2A_K$ is Finite 101
§ 2. The Kummer Pairing for Elliptic Curves 105
§ 3. Second Proof of the Weak Mordell–Weil Theorem 107
§ 4. Kummer Theory for the Multiplicative Group 109
§ 5. Bashmakov's Theorem 115

Chapter VI. Integral Points 128

§ 1. The Equation $a\alpha + b\alpha' = 1$ in Units 129
§ 2. Reduction of Integral Points to the Unit Equation by Siegel's Method 137
§ 3. Chabauty's Method 140
§ 4. Reduction to the Weierstrass Form 142
§ 5. The Thue-Siegel Curve 144
§ 6. Curves of Genus 0 146
§ 7. Applications to Curves of Higher Genus 147
§ 8. Reduction to Inequalities on Elliptic Logarithms 148
Appendix 151

Part II. Approximation of Logarithms

Chapter VII. Auxiliary Results 159

§ 1. Heights and Sizes 159
§ 2. Linear Equations 162
§ 3. Estimates for Derivatives 164
§ 4. Feldman Polynomials 166
§ 5. Estimates for Entire Functions 169
§ 6. The p-Adic Case 173

Introduction to the Baker Method 176

Chapter VIII. The Baker–Feldman Theorem 181

§ 1. Statement of the Theorem 181
§ 2. Main Lemma and its Application 184
§ 3. Construction of the Approximating Function 186
§ 4. Two Estimates 188
§ 5. Extrapolation on Integral Multiples 190
§ 6. Extrapolation on Fractional Multiples 192

Chapter IX. Linear Combinations of Elliptic Logarithms 193

§ 1. Remarks on Complex Multiplication 193
§ 2. Statement of the Theorem. 197
§ 3. Main Lemma and its Application 198
§ 4. Construction of the Approximating Function 199
§ 5. Some Estimates 202
§ 6. Extrapolation on Integral Multiples 207
§ 7. Extrapolation on Fractional Multiples 210

Introduction to Chapters X and XI. 212

Chapter X. The Baker–Tijdeman Theorem 218

§ 1. Statement of the Theorem. 218
§ 2. Main Lemma and its Application 221
§ 3. Construction of the System of Linear Equations 226
§ 4. Extrapolation on Integral Multiples 229
§ 5. Extrapolation on Fractional Multiples 232

Chapter XI. Refined Inequalities 234

§ 1. Statement of the Theorem. 234
§ 2. Main Lemma and its Application 235
§ 3. Construction of the System of Linear Equations 238
§ 4. Proof of the Main Lemma 241
§ 5. Final Descent 246
