

## CONTENTS

Preface . . . . .	ix
Recurrent Notations . . . . .	xiii
Chapter 1. Diophantine Equations . . . . .	1
Chapter 2. The Integers . . . . .	7
2.1. Axiomatics . . . . .	7
2.2. Applications of the Pigeonhole Principle . . . . .	9
Chapter 3. Algebraic Numbers and Liouville's Theorem . . . . .	17
3.1. Algebraic Numbers . . . . .	17
3.2. Liouville's Theorem . . . . .	20
Chapter 4. Lemmas on Polynomials and Algebraic Numbers . . . . .	33
4.1. Bounds for Roots and Coefficients . . . . .	33
4.2. Improved Bounds . . . . .	47
4.3. Discriminants and Resultants . . . . .	71
Chapter 5. Thue's Theorem . . . . .	85
5.1. Thue's Theorem . . . . .	85
5.2. The Idea of Thue's Proof . . . . .	86
5.3. Existence of the Identity . . . . .	88
5.4. A Good Approximation of $\alpha$ Generates Additional (Almost) Good Approximations Much Closer to $\alpha$ . . . . .	90
5.5. Application of the General Principle (5.2.6) . . . . .	92
5.6. The Overlapping of the Intervals . . . . .	93
5.7. The Proof . . . . .	94
Chapter 6. Roth's Lemma . . . . .	98
6.1. Historical Background of Roth's Theorem . . . . .	98
6.2. The Nature of Roth's Proof . . . . .	100
6.3. Generalized Wronskians . . . . .	101
6.4. A Non-Archimedean Valuation on $\mathbb{Q}(x_1, \dots, x_m)$ . . . . .	108
6.5. The Index as a Function of Height and Degree . . . . .	111
6.6. Proof of Roth's Lemma . . . . .	116

Chapter 7.	Wirsing's Theorem . . . . .	121
7.1.	Notions of Measure Theory and Probability Theory . . . . .	121
7.2.	The Weak Law of Large Numbers . . . . .	125
7.3.	A Geometric Representation of $m$ -Variable Polynomials . . . . .	129
7.4.	If $\alpha$ Were Easy to Approximate, Then $P$ Would Have a Large Index . . . . .	132
7.5.	Proof of Wirsing's Theorem . . . . .	138
Chapter 8.	Motivation for the Proofs of Various Inequalities Involving Algebraic and Transcendental Numbers. . . . .	149
8.1.	Generalities . . . . .	149
8.2.	Flat Functions . . . . .	150
8.3.	Hermite Interpolation . . . . .	156
8.4.	Application to Flat Entire Functions with Discrete Behavior at Integral Points . . . . .	164
8.5.	Some Nonvanishing Determinants . . . . .	177
8.6.	Some Auxiliary Functions . . . . .	185
8.7.	Distribution of Primes . . . . .	188
Chapter 9.	Feldman's Theorem . . . . .	196
9.1.	Statement of the Theorem . . . . .	196
9.2.	Application of the Pigeonhole Principle . . . . .	202
9.3.	The Discreteness of $\varphi$ . . . . .	207
9.4.	The Flatness of $\varphi$ . . . . .	209
9.5.	Application of the Hermite Interpolation Formula . . . . .	211
9.6.	Conclusion of the Proof . . . . .	220
Chapter 10.	Transcendence Theorems of Baker . . . . .	226
Chapter 11.	Effective Algebraic Number Theory . . . . .	237
11.1.	Definitions and Preliminary Results . . . . .	237
11.2.	Some Geometry of Numbers . . . . .	259
11.3.	The Effective Dirichlet Unit Theorem . . . . .	276
Chapter 12.	Algorithms for Solving Certain Diophantine Equations . . . . .	290
12.1.	Two-Variable Homogeneous Diophantine Equations. . . . .	290
12.2.	Big $\beta$ and Little $\beta$ . . . . .	295
12.3.	Reduction to a Problem on Linear Combinations of Logarithms . . . . .	297
12.4.	The Proof . . . . .	300

Chapter 13. Further Results and Further Problems . . . . .	304
References . . . . .	311
Index . . . . .	325
