

# CONTENTS

## Chapter I. Equivariant Classical Cohomology

1.	G-complexes . . . . .	1
2.	Equivariant cohomology theories . . . . .	4
3.	The category of canonical orbits. . . . .	7
4.	Generic coefficient systems . . . . .	9
5.	Coefficient systems on a G-complex. . . . .	12
6.	Cohomology. . . . .	14
7.*	Equivariant maps. . . . .	15
8.*	Products. . . . .	19
9.*	Another description of cochains . . . . .	20
10.*	A spectral sequence . . . . .	22

## Chapter II. Equivariant Obstruction Theory

1.	The obstruction cocycle . . . . .	1
2.	Primary obstructions. . . . .	5
3.	The characteristic class of a map . . . . .	8
4.	Hopf G-spaces . . . . .	10
5.*	Equivariant deformations and homotopy type. . . . .	11
6.	Eilenberg-MacLane G-complexes . . . . .	13
7.*	n-connected G-complexes . . . . .	17

## Chapter III. Function Spaces, Fibrations and Spectra

1.	Function spaces . . . . .	1
2.*	The Puppe sequence. . . . .	4
3.	G-spectra . . . . .	4
4.*	G-fiber spaces. . . . .	6

Chapter IV. Generalized Equivariant Cohomology

1. Equivariant cohomology via G-spectra. . . . .	1
2. Exact couples . . . . .	2
3. The spectral sequence of a filtered G-complex	5
4. The main spectral sequence. . . . .	6
5. The "classical" uniqueness theorem. . . . .	11
