Editorial note	V
Preface	VII
CHAPTER 1. Differentiable functions in R^n	1
§ 1.1 Taylor's formula	2
§ 1.2 Partitions of unity	11
§ 1.3 Inverse functions, implicit functions and the rank theorem.	13
§ 1.4 Sard's theorem and functional dependence	19
§ 1.5 Borel's theorem on Taylor series.	28
§ 1.6 Whitney's approximation theorem	31
§ 1.7 An approximation theorem for holomorphic functions.	38
§ 1.8 Ordinary differential equations	43
CHAPTER 2. Manifolds	52
§ 2.1 Basic definitions	52
§ 2.2 The tangent and cotangent bundles.	60
§ 2.3 Grassmann manifolds	66
§ 2.4 Vector fields and differential forms.	69
§ 2.5 Submanifolds	80
§ 2.6 Exterior differentiation	86
§ 2.7 Orientation	94
§ 2.8 Manifolds with boundary	96
§ 2.9 Integration	100

§ 2.10 One parameter groups	106
§ 2.11 The Frobenius theorem.	112
§ 2.12 Almost complex manifolds	122
§ 2.13 The lemmata of Poincaré and Grothendieck.	128
§ 2.14 Applications: Hartogs' continuation theorem and the Oka-Weil theorem	134
§ 2.15 Immersions and imbeddings: Whitney's theorems .	141
§ 2.16 Thom's transversality theorem.	150
CHAPTER 3. Linear elliptic differential operators.	155
§ 3.1 Vector bundles	155
§ 3.2 Fourier transforms.	164
§ 3.3 Linear differential operators.	171
§ 3.4 The Sobolev spaces.	184
§ 3.5 The lemmata of Rellich and Sobolev	191
§ 3.6 The inequalities of Gårding and Friedrichs	200
§ 3.7 Elliptic operators with C^∞ coefficients: the regularity theorem	211
§ 3.8 Elliptic operators with analytic coefficients	218
§ 3.9 The finiteness theorem	226
§ 3.10 The approximation theorem and its application to open Riemann surfaces	234
