

# Contents

Introduction. . . . .	1
Chapter I. $\mathcal{V}$ functors. . . . .	9
§1. Linear isometries and classical groups. . . . .	9
§2. The bar construction; $F$ , $Top$ , and $PL$ . . . . .	18
Chapter II. Coordinate-free spectra. . . . .	25
§1. Spaces, prespectra, and spectra. . . . .	26
§2. The stable homotopy category. . . . .	32
§3. Cohomology; periodic spaces and spectra. . . . .	39
Chapter III. Orientation theory. . . . .	49
§1. Elementary orientation theory. . . . .	49
§2. Classification of $E$ -oriented $GV$ -bundles. . . . .	54
Chapter IV. $E_\infty$ ring spectra. . . . .	63
§1. $E_\infty$ ring prespectra and spectra. . . . .	65
§2. $\mathcal{J}_*$ prefunctors and Thom spectra. . . . .	73
§3. Orientation theory for $E_\infty$ ring spectra. . . . .	79
Chapter V. On $kO$ -oriented bundle theories. . . . .	87
§1. $E$ -orientations of stable bundle theories. . . . .	89
§2. Cannibalistic classes and the comparison diagram. . . . .	94
§3. The $kO$ -orientation of $Spin$ and the $J$ -theory diagram. . . . .	103
§4. Local analysis of the $J$ -theory diagram. . . . .	110
§5. $JSpin X$ and the $\delta$ and $\epsilon$ invariants. . . . .	114
§6. Sullivan's analysis of topological bundle theory. . . . .	123
§7. Infinite loop analysis of the main diagrams. . . . .	130

Chapter VI. $E_\infty$ ring spaces and bipermutative categories . . . . .	139
§1. The definition of $E_\infty$ ring spaces . . . . .	139
§2. Units; examples of operad pairs . . . . .	146
§3. Symmetric bimonoidal and bipermutative categories . . . . .	151
§4. Bipermutative categories and $E_\infty$ ring spaces . . . . .	157
§5. Examples of bipermutative categories . . . . .	160
Chapter VII. The recognition principle for $E_\infty$ ring spaces . . . . .	168
§1. The little convex bodies operads . . . . .	169
§2. The canonical $E_\infty$ operad pair . . . . .	176
§3. The one operad recognition principle . . . . .	180
§4. The two operad recognition principle . . . . .	188
§5. The multiplicative $E_\infty$ structure and localizations . . . . .	194
Chapter VIII. Algebraic and topological K-theory. . . . .	201
§1. Examples; algebraic K-theory . . . . .	203
§2. Bott periodicity and Brauer lifting . . . . .	212
§3. Finite fields, Frobenius, and B Coker J . . . . .	223
§4. The splitting of $SF$ at odd primes . . . . .	235
Chapter IX. Pairings in infinite loop space theory . . . . .	244
§1. Pairings of categories and of $\mathbb{Q}$ -spaces . . . . .	246
§2. The recognition principle for pairings . . . . .	250
Bibliography . . . . .	257
Index . . . . .	263
