## Introduction.

### Part I. Background in Topology.

§ I.1. Survey of general topology . . . . .	1
§ I.2. Survey of Euclidean spaces . . . . .	19
§ I.3. Survey of Abelian groups . . . . .	26
§ I.4. <b>MAYER</b> complexes . . . . .	30
§ I.5. Formal complexes . . . . .	45
§ I.6. General cohomology theory . . . . .	63
§ I.7. Cohomology groups in Euclidean spaces . . . . .	98

### Part II. Topological study of continuous transformations in $R^n$ .

§ II.1. Orientation in $R^n$ . . . . .	110
§ II.2. The topological index . . . . .	120
§ II.3. Multiplicity functions and index functions . . . . .	145

### Part III. Background in Analysis.

§ III.1. Survey of functions of real variables . . . . .	190
§ III.2. Functions of open intervals in $R^n$ . . . . .	201

### Part IV. Bounded variation and absolute continuity in $R^n$ .

§ IV.1. Measurability questions . . . . .	212
§ IV.2. Bounded variation and absolute continuity with respect to a base-function . . . . .	221
§ IV.3. Bounded variation and absolute continuity with respect to a multiplicity function . . . . .	232
§ IV.4. Essential bounded variation and absolute continuity . . . . .	249
§ IV.5. Bounded variation and absolute continuity in the <b>BANACH</b> sense . . . . .	277

### Part V. Differentiable transformations in $R^n$ .

§ V.1. Continuous transformations in $R^1$ . . . . .	292
§ V.2. Local approximations in $R^n$ . . . . .	319
§ V.3. Special classes of differentiable transformations in $R^n$ . . . . .	349

### Part VI. Continuous transformations in $R^2$

§ VI.1. The topological index in $R^2$ . . . . .	377
§ VI.2. Special features of continuous transformations in $R^2$ . . . . .	402
§ VI.3. Special classes of differentiable transformations in $R^2$ . . . . .	415

<b>Index</b> . . . . .	439
------------------------	-----

<b>Bibliography</b> . . . . .	442
