Introduction	1
<i>Chapter I. The bordism groups</i>	5
1. Differentiable manifolds	5
2. The Thom bordism groups	7
3. Straightening the angle	9
4. The bordism groups of pairs of spaces	10
5. The Eilenberg-Steenrod axioms	12
6. Consequences of the axioms	13
7. The bordism spectral sequence	16
8. Unoriented bordism groups	18
9. Differentiable bordism groups	19
10. A review of differential topology	20
11. The Thom spaces	24
12. Homotopy interpretation of the bordism groups	27
13. Duality and cobordism	35
<i>Chapter II. Computation of the bordism groups</i>	38
14. Triviality mod C	38
15. Steenrod representation	41
16. A generalization of Rochlin's theorem	43
17. Algebraic invariants of maps	45
18. The existence of an Ω -base	49
<i>Chapter III. The G-bordism groups</i>	50
19. The principal G -bordism groups	50
20. The transfer homomorphism	52
21. The G -bordism groups	55
22. Tubular neighborhoods	57
<i>Chapter IV. Differentiable involutions</i>	59
23. Fixed point free involutions	59
24. Fixed point sets of differentiable involutions	61
25. The normal bundle and the tangent bundle to the fixed point set	65
26. The Smith homomorphism	67
27. Dimension of fixed point sets	69
28. Unrestricted bordism classes of involutions	73
<i>Chapter V. Differentiable actions of $(Z_2)^k$</i>	75
29. Free actions of $(Z_2)^k$	75
30. Actions of $(Z_2)^k$ without stationary points	76
31. Actions of $Z_2 \times Z_2$ with isolated stationary points	76
<i>Chapter VI. Differentiable involutions and bundles</i>	81
32. The bundle involution	81
33. The Borsuk antipode theorems	85

<i>Chapter VII. The structure of $\Omega_*(Z_p)$, p an odd prime</i>	89
34. Preliminaries	89
35. The fixed point set	93
36. The structure of $\Omega_*(Z_p)$	94
37. The bordism groups $\Omega_*(Z_p, k)$	98
<i>Chapter VIII. Fixed points of maps of odd prime period</i>	104
38. Generalities about the normal bundle	104
39. Actions of $Z_p \times Z_p$ without stationary points	109
40. Fixed point sets with trivial normal bundles	111
41. Manifolds all of whose Pontryagin numbers are divisible by p	113
42. Fixed point sets with trivial normal bundles; the general case	116
<i>Chapter IX. Actions of finite abelian groups of odd prime power order</i>	124
43. Actions of $(Z_p)^k$	125
44. Kunnetth formulas	131
45. Actions of groups of odd prime power order	137
46. The module structure of $\Omega_*(Z_p)$	143
