

CONTENTS

CHAPTER I. INTRODUCTION

I.1	Coverings	1
I.2.	Metrization	4
I.3.	Mappings	7
I.4.	Dimension	8

CHAPTER II. DIMENSION OF METRIC SPACES

II.1.	The lemmas to the sum theorem.	11
II.2.	The sum theorem	14
II.3.	The decomposition theorem	18
II.4.	The product theorem.	20
II.5.	The strong inductive dimension and the covering dimension.	22
II.6.	Some theorems characterizing dimension	28
II.7.	Rank of coverings	34
II.8.	Normal families	44

CHAPTER III. MAPPINGS AND DIMENSION

III.1.	Stable value	49
III.2.	Extensions of mappings	52
III.3.	Essential mappings	55
III.4.	Continuous mappings which lower dimension	61
III.5.	Continuous mappings which raise dimension	68
III.6.	Baire's zero-dimensional spaces	73
III.7.	Uniformly zero-dimensional mappings	79

CHAPTER IV. DIMENSION OF SEPARABLE METRIC SPACES

IV.1.	Cantor manifolds	90
IV.2.	Dimension of E^n	93
IV.3.	Some theorems in Euclidean space.	99
IV.4.	Imbedding	101
IV.5.	ε -mappings.	108
IV.6.	Dimension and measure.	112
IV.7.	Dimension and the ring of continuous functions.	117

CHAPTER V. DIMENSION AND METRIZATION

V.1.	Characterization of dimension by a sequence of coverings	126
V.2.	Length of coverings	133
V.3.	Dimension and metric function	137
V.4.	Another metric that characterizes dimension	154

CONTENTS

CHAPTER VI. INFINITE-DIMENSIONAL SPACES

VI.1. Countable-dimensional spaces	163
VI.2. Imbedding of countable-dimensional spaces	170
VI.3. Transfinite inductive dimension	177
VI.4. General imbedding theorem	184

CHAPTER VII. DIMENSION OF NON-METRIZABLE SPACES

VII.1. The general sum theorem	188
VII.2. Dimension of non-metrizable spaces	196
VII.3. The sum theorem for strong inductive dimension	199
VII.4. Dimension and mappings	208

CHAPTER VIII. DIMENSION AND COHOMOLOGY

VIII.1. Homology group and cohomology group of a complex	220
VIII.2. Cohomology group of a topological space	231
VIII.3. Dimension and cohomology	234
VIII.4. Dimension and homology	244
BIBLIOGRAPHY	249
