

# CONTENTS

PREFACE . . . . .	v
-------------------	---

## Chapter I

### A General Theory of Limits

1. Directed Sets. The Moore-Smith General Limit . . . . .	1
2. Properties of Limits . . . . .	5
3. Values Approached . . . . .	7
4. Extreme Limits . . . . .	9
5. Directed Sets of Sequential Character . . . . .	11
6. General Sums . . . . .	12
7. Double and Iterated Limits . . . . .	13
8. Filters . . . . .	17
9. Linear Spaces . . . . .	20

## Chapter II

### Riemannian Type of Integration

1. Functions of Intervals . . . . .	25
2. Integrals of Functions of Intervals . . . . .	27
3. Existence Theorems . . . . .	28
4. The Integral of an Interval Function as a Function of Intervals . . . . .	33
5. Integral as a Function of the Interval Function . . . . .	35
6. Functions of Bounded Variation . . . . .	37
7. Continuity Properties of Functions of Bounded Variation . . . . .	40
8. The Space of Functions of Bounded Variation . . . . .	41
9. Riemann-Stieltjes Integrals . . . . .	47
10. Existence Theorems for Riemann-Stieltjes Integrals . . . . .	49
11. Properties of Riemann-Stieltjes Integrals . . . . .	52
12. Classes of Functions Determined by Stieltjes Integrals . . . . .	56
13. Riemann-Stieltjes Integrals with Respect to Functions of Bounded Variation. Existence Theorems . . . . .	58
14. Properties of $\int_a^b f dg$ with $g$ of Bounded Variation on $(a, b)$ . . . . .	67
15. Convergence Theorems . . . . .	69
16. The Integral as Function of the Upper Limit . . . . .	76
17. The Integral as a Function of a Parameter . . . . .	78
18. Linear Continuous Functionals on the Space of Continuous Functions . . . . .	81
19. Additional Definitions of Riemann Integrals of Stieltjes Type . . . . .	86
20. Stieltjes Integrals on Infinite Intervals . . . . .	97
21. A Linear Form on the Infinite Interval . . . . .	98

## Chapter III

### Integrals of Riemann Type of Functions of Intervals in Two or Higher Dimension

1. Interval Functions . . . . .	101
2. Subdivisions . . . . .	102
3. Integrals . . . . .	103
4. Functions of Bounded Variation in Two Dimensions . . . . .	106
5. Continuity Properties . . . . .	109

6. The Space of Functions of Bounded Variation in Two Variables: BV2 . . . . .	114
7. Functions of Bounded Variation According to Fréchet . . . . .	116
8. Riemann-Stieltjes Integrals in Two Variables . . . . .	123
9. Stieltjes Integrals in Two Dimensions with Respect to Functions of Bounded Variation . . . . .	128
10. Relation between Double and Iterated Integrals . . . . .	132
11. Double Integrals with Respect to Functions of Fréchet Bounded Variation . . . . .	136

## Chapter IV

**Sets**

1. Fundamental Operations . . . . .	141
2. Characteristic Functions . . . . .	146
3. Properties of Classes of Sets . . . . .	146
4. Extensions of Classes of Sets Relative to Properties . . . . .	148

## Chapter V

**Content and Measure**

1. Content of a Linear Bounded Set . . . . .	155
2. Properties of the Content Functions . . . . .	157
3. Borel Measurability . . . . .	162
4. General Lebesgue Measure of Linear Sets . . . . .	163
5. Lower Measure . . . . .	166
6. Measurability . . . . .	168
7. Examples of Measurable Sets . . . . .	171
8. Sets of Zero Measure . . . . .	172
9. Additional Properties of Upper and Lower Measure . . . . .	173
10. Additional Conditions for Measurability . . . . .	173
11. The Function $\alpha(x)$ Is Unbounded . . . . .	175
12. Lebesgue Measure . . . . .	179
13. Relation between $\alpha$ -Measure and Lebesgue Measure . . . . .	182
14. Relations between Classes of $\alpha$ -Measurable Sets . . . . .	183
15. Measurability of Sets in Euclidean Space of Higher Dimension . . . . .	188
16. Some Abstract Measure Theory . . . . .	191
17. Upper Semiaffine Functions . . . . .	196

## Chapter VI

**Measurable Functions**

1. Semicontinuous Functions . . . . .	199
2. Measurable Functions . . . . .	203
3. Properties of Measurable Functions . . . . .	205
4. Examples of Measurable Functions . . . . .	207
5. Properties of Measurable Functions Depending on the Measure Functions . . . . .	209
6. Approximations to Measurable Functions. Lusin's Theorem . . . . .	215

## Chapter VII

**Lebesgue-Stieltjes Integration**

1. The Lebesgue Postulates on Integration . . . . .	219
2. The Lebesgue Method of Defining an Integral . . . . .	224
3. A Riemann-Young Type of Integral Definition. The $Y$ -Integral . . . . .	231

4. Properties of the Integrals . . . . .	239
5. The Integral as a Function of Measurable Sets . . . . .	239
6. L-S Integrals as Functions of Intervals . . . . .	241
7. Absolute Continuity . . . . .	242
8. Properties of the Integral $I(f, a, E) = \int_E f da$ as a Function of $f$ . . . . .	244
9. Directed Limits and L-S Integration . . . . .	255
10. Properties of the Integral $I(f, a, E) = \int_E f da$ as a Function of $a$ . . . . .	258
11. Integration with Respect to Functions of Bounded Variation . . . . .	261
12. Integration with Respect to Unbounded Measure Functions . . . . .	274

## Chapter VIII

**Classes of Measurable and Integrable Functions**

1. The Class of $\alpha$ -Measurable Functions . . . . .	285
2. The Class of Almost Bounded $\alpha$ -Measurable Functions . . . . .	288
3. The Space $L_1$ . . . . .	290
4. The Space $L^p$ with $0 < p < \infty$ . . . . .	291
5. Separability . . . . .	296
6. The Space $L^2$ . Orthogonal Functions. Riesz-Fischer Theorem . . . . .	299

## Chapter IX

**Other Methods of Defining the Class of Lebesgue Integrable Functions. Abstract Integrals**

1. The Space $L^1$ as the Completion of a Metric Space by Cauchy Sequences	310
2. Construction of the Space $L^1$ by the Use of Osgood's Theorem . . . . .	312
3. L-S Integration Based on Monotonic Sequences of Semicontinuous Functions	317
4. Lebesgue-Stieltjes Integrals on an Abstract Set . . . . .	320

## Chapter X

**Product Measures. Iterated Integrals. Fubini Theorem**

1. Product Measures . . . . .	327
2. The Lebesgue-Stieltjes Integrals as the Measure of a Plane Set . . . . .	333
3. Fubini Theorem on Double and Iterated Integrals . . . . .	335

## Chapter XI

**Derivatives and Integrals**

1. Riemann Integrals and Derivatives . . . . .	343
2. On Derivatives . . . . .	345
3. The Vitali Theorem . . . . .	354
4. Derivatives of Monotonic Functions and of Functions of Bounded Variation	357
5. Derivatives of Indefinite Lebesgue Integrals . . . . .	361
6. Lebesgue Integrals of Derivatives . . . . .	365
7. Lebesgue Decomposition of Functions of Bounded Variation . . . . .	369
8. The Radon-Nikodym Theorem . . . . .	375

## SOME REFERENCE BOOKS ON INTEGRATION . . . . .

## SUBJECT INDEX . . . . .
