

# Table of Contents

Preface . . . . .	v
Introduction . . . . .	3
A. The general problem of integration	
1. The integral as a function of the domain . . . . .	3
2. Polyhedral chains . . . . .	5
3. Two continuity hypotheses . . . . .	5
4. A further continuity hypothesis . . . . .	6
5. Some examples . . . . .	7
6. The case $r = n$ . . . . .	7
7. The $r$ -vector of an oriented $r$ -cell . . . . .	8
8. On $r$ -vectors and boundaries of $(r + 1)$ -cells . . . . .	9
9. Grassmann algebra . . . . .	10
10. The dual algebra . . . . .	11
11. Integration of differential forms . . . . .	13
B. Some classical topics	
12. Grassmann algebra in metric oriented $n$ -space . . . . .	13
13. The same, $n = 3$ . . . . .	14
14. The differential of a mapping . . . . .	15
15. Jacobians . . . . .	16
16. Transformation of the integral . . . . .	17
17. Smooth manifolds . . . . .	18
18. Particular forms of integrals in 3-space . . . . .	19
19. The Theorem of Stokes . . . . .	21
20. The exterior differential . . . . .	21
21. Some special formulas in metric oriented $E^3$ . . . . .	23
22. An existence theorem . . . . .	24
23. De Rham's Theorem . . . . .	25
C. Indications of general theory	
24. Normed spaces of chains and cochains . . . . .	27
25. Continuous chains . . . . .	28
26. On 0-dimensional integration . . . . .	30

## Part I: Classical theory

## Chapter I. Grassmann algebra

1. Multivectors . . . . .	35
2. Multicovectors . . . . .	37
3. Properties of $V_{[r]}$ and $V^{[r]}$ . . . . .	38
4. Alternating $r$ -linear functions . . . . .	39
5. Use of coordinate systems . . . . .	40
6. Exterior products . . . . .	41
7. Interior products . . . . .	42
8. $n$ -vectors in $n$ -space . . . . .	44
9. Simple multivectors . . . . .	44
10. Linear mappings of vector spaces . . . . .	46
11. Duality . . . . .	47
12. Euclidean vector spaces . . . . .	48
13. Mass and comass . . . . .	52
14. Mass and comass of products . . . . .	55
15. On projections . . . . .	56

## Chapter II. Differential forms

1. The differential of a smooth mapping . . . . .	58
2. Some properties of differentials . . . . .	60
3. Differential forms . . . . .	61
4. Smooth mappings . . . . .	62
5. Use of coordinate systems . . . . .	63
6. Jacobians . . . . .	66
7. The inverse and implicit function theorems . . . . .	68
8. The exterior differential . . . . .	70
9. A representation of vectors and covectors . . . . .	74
10. Smooth manifolds . . . . .	75
11. The tangent space of a smooth manifold . . . . .	75
12. Differential forms in smooth manifolds . . . . .	76
13. A characterization of the exterior differential . . . . .	77

## Chapter III. Riemann integration theory

1. The $r$ -vector of an oriented $r$ -simplex . . . . .	80
2. The $r$ -vector of an $r$ -chain . . . . .	81
3. Integration over cellular chains . . . . .	82
4. Some properties of integrals . . . . .	83
5. Relation to the Riemann integral . . . . .	84
6. Integration over open sets . . . . .	85

7. The transformation formula . . . . .	87
8. Proof of the transformation formula . . . . .	89
9. Transformation of the Riemann integral . . . . .	92
10. Integration in manifolds . . . . .	92
11. Stokes' Theorem for a parallelepiped . . . . .	94
12. A special case of Stokes' Theorem . . . . .	96
13. Sets of zero $s$ -extent . . . . .	97
14. Stokes' Theorem for standard domains . . . . .	99
15. Proof of the theorem . . . . .	101
16. Regular forms in Euclidean space. . . . .	103
17. Regular forms in smooth manifolds . . . . .	106
18. Stokes' Theorem for standard manifolds . . . . .	108
19. The iterated integral in Euclidean space . . . . .	110

## Chapter IV. Smooth manifolds

### A. Manifolds in Euclidean space

1. The imbedding theorem . . . . .	113
2. The compact case . . . . .	113
3. Separation of subsets of $E^m$ . . . . .	114
4. Regular approximations . . . . .	115
5. Proof of Theorem 1A, $M$ compact . . . . .	115
6. Admissible coordinate systems in $M$ . . . . .	116
7. Proof of Theorem 1A, $M$ not compact . . . . .	117
8. Local properties of $M$ in $E^m$ . . . . .	117
9. On $n$ -directions in $E^m$ . . . . .	119
10. The neighborhood of $M$ in $E^m$ . . . . .	120
11. Projection along a plane . . . . .	123

### B. Triangulation of manifolds

12. The triangulation theorem . . . . .	124
13. Outline of the proof. . . . .	124
14. Fullness . . . . .	125
15. Linear combinations of edge vectors of simplexes . . . . .	127
16. The quantities used in the proof . . . . .	128
17. The complex $L$ . . . . .	128
18. The complex $L^*$ . . . . .	129
19. The intersections of $M$ with $L^*$ . . . . .	130
20. The complex $K$ . . . . .	131
21. Imbedding of simplexes in $M$ . . . . .	132
22. The complexes $K_p$ . . . . .	133
23. Proof of the theorem . . . . .	134

## C. Cohomology in manifolds

24. $\mu$ -regular forms . . . . .	135
25. Closed forms in star shaped sets . . . . .	136
26. Extensions of forms. . . . .	137
27. Elementary forms . . . . .	138
28. Certain closed forms are derived . . . . .	141
29. Isomorphism of cohomology rings . . . . .	142
30. Periods of forms . . . . .	143
31. The Hopf invariant . . . . .	143
32. On smooth mappings of manifolds . . . . .	145
33. Other expressions for the Hopf invariant . . . . .	147

## Part II: General theory

## Chapter V. Abstract integration theory

1. Polyhedral chains . . . . .	152
2. Mass of polyhedral chains . . . . .	153
3. The flat norm . . . . .	154
4. Flat cochains . . . . .	156
5. Examples . . . . .	158
6. The sharp norm . . . . .	159
7. Sharp cochains . . . . .	160
8. Characterization of the norms . . . . .	163
9. An algebraic criterion for a multicovector . . . . .	165
10. Sharp $r$ -forms . . . . .	167
11. Examples . . . . .	171
12. The semi-norms $ A ^{\flat},  A ^{\sharp}$ are norms . . . . .	173
13. Weak convergence . . . . .	175
14. Some relations between the spaces of chains and cochains	177
15. The $\rho$ -norms . . . . .	178
16. The mass of chains . . . . .	179
17. Separability of spaces of chains . . . . .	181
18. Non-separability of spaces of cochains . . . . .	182

## Chapter VI. Some relations between chains and functions

1. Continuous chains on the real line . . . . .	187
2. 0-chains in $E^1$ defined by functions of bounded variation .	190
3. Sharp functions times 0-chains . . . . .	193
4. The part $<T$ of a chain of finite mass . . . . .	194
5. Functions of bounded variation in $E^1$ defined by 0-chains	196
6. Some related analytical theorems . . . . .	198

7. Continuous $r$ -chains in $E^n$ . . . . .	199
8. On compact cochains . . . . .	202
9. The boundary of a smooth chain . . . . .	204
10. Continuous chains in smooth manifolds . . . . .	205

## Chapter VII. General properties of chains and cochains

1. Sharp functions times chains . . . . .	208
2. Sharp functions times cochains . . . . .	212
3. Supports of chains and cochains . . . . .	213
4. On non-compact chains . . . . .	217
5. On polyhedral approximations . . . . .	219
6. The $r$ -vector of an $r$ -chain . . . . .	220
7. Sharp chains at a point . . . . .	221
8. Molecular chains are dense . . . . .	223
9. Flat $r$ -chains in $E^{r-k}$ are zero . . . . .	224
10. Flat cochains in complexes . . . . .	225
11. Elementary flat cochains in a complex . . . . .	226
12. The isomorphism theorem . . . . .	229

## Chapter VIII. Chains and cochains in open sets

1. Chains and cochains in open sets, elementary properties . . . . .	232
2. Chains and cochains in open sets, further properties . . . . .	236
3. Properties of mass . . . . .	241
4. On the open sets to which a chain belongs . . . . .	243
5. An expression for flat chains . . . . .	246
6. An expression for sharp chains . . . . .	248

## Part III: Lebesgue theory

## Chapter IX. Flat cochains and differential forms

1. $n$ -cochains in $E^n$ . . . . .	255
2. Some properties of fullness. . . . .	256
3. Properties of projections . . . . .	257
4. Elementary properties of $D_X(p, \alpha)$ . . . . .	258
5. The $r$ -form defined by a flat $r$ -cochain . . . . .	260
6. Flat $r$ -forms . . . . .	262
7. Flat $r$ -forms and flat $r$ -cochains . . . . .	263
8. Flat $r$ -direction functions . . . . .	266
9. Flat forms defined by components . . . . .	268
10. Approximation to $D_X(p)$ by $X \cdot \sigma   \sigma$ . . . . .	270
11. Total differentiability of Lipschitz functions . . . . .	271
12. On the exterior differential of $r$ -forms . . . . .	272

13. On averages of $r$ -forms . . . . .	275
14. Products of cochains . . . . .	276
15. Lebesgue chains . . . . .	280
16. Products of cochains and chains . . . . .	281
17. Products and weak limits . . . . .	284
18. Characterization of the products . . . . .	286
Chapter X. Lipschitz mappings	
1. Affine approximations to Lipschitz mappings . . . . .	289
2. The approximation on the edges of a simplex . . . . .	290
3. Approximation to the Jacobian . . . . .	292
4. The volume of affine approximations . . . . .	293
5. A continuity lemma . . . . .	295
6. Lipschitz chains . . . . .	296
7. Lipschitz mappings of open sets . . . . .	298
8. Lipschitz mappings and flat cochains. . . . .	302
9. Lipschitz mappings and flat forms . . . . .	302
10. Lipschitz mappings and sharp functions . . . . .	305
11. Lipschitz mappings and products . . . . .	306
12. On the flat norm of Lipschitz chains . . . . .	307
13. Deformations of chains . . . . .	308
Chapter XI. Chains and additive set functions	
1. On finite dimensional Banach spaces . . . . .	311
2. Vector valued additive set functions . . . . .	312
3. Vector valued integration . . . . .	314
4. Point functions times set functions . . . . .	316
5. Relations between a set function and its variation . . . . .	318
6. On positive linear functionals . . . . .	320
7. On bounded linear functionals. . . . .	322
8. Linear functions of sharp $r$ -forms . . . . .	323
9. The sharp norm of $r$ -vector valued set functions . . . . .	325
10. Molecular set functions . . . . .	325
11. Sharp chains and set functions . . . . .	326
12. Bounded Borel functions times chains . . . . .	328
13. The part of a chain in a Borel set. . . . .	329
14. Chains and point functions . . . . .	330
15. Characterization of the sharp norm . . . . .	331
16. Expression for the sharp norm . . . . .	333
17. Other expressions for the norm . . . . .	335
Appendix I. Vector and linear spaces	
1. Vector spaces . . . . .	342

2. Linear transformations . . . . .	343
3. Conjugate spaces . . . . .	343
4. Direct sums, complements . . . . .	344
5. Quotient spaces . . . . .	345
6. Pairing of linear spaces . . . . .	345
7. Abstract homology . . . . .	346
8. Normed linear spaces . . . . .	346
9. Euclidean linear spaces . . . . .	348
10. Affine spaces . . . . .	349
11. Barycentric coordinates . . . . .	351
12. Affine mappings . . . . .	352
13. Euclidean spaces . . . . .	353
14. Banach spaces . . . . .	353
15. Semi-conjugate spaces . . . . .	354

## Appendix II. Geometric and topological preliminaries

1. Cells, simplexes . . . . .	356
2. Polyhedra, complexes . . . . .	357
3. Subdivisions . . . . .	357
4. Standard subdivisions . . . . .	358
5. Orientation . . . . .	360
6. Chains and cochains . . . . .	361
7. Boundary and coboundary . . . . .	362
8. Homology and cohomology . . . . .	362
9. Products in a complex . . . . .	363
10. Joins . . . . .	364
11. Subdivisions of chains . . . . .	364
12. Cartesian products of cells . . . . .	365
13. Mappings of complexes . . . . .	366
14. Some properties of planes . . . . .	367
15. Mappings of $n$ -pseudomanifolds into $n$ -space . . . . .	368
16. Distortion of triangulations of $E^m$ . . . . .	370

## Appendix III. Analytical preliminaries

1. Existence of certain functions . . . . .	372
2. Partitions of unity . . . . .	373
3. Smoothing functions by taking averages . . . . .	373
4. The Weierstrass approximation theorem . . . . .	375
5. Lebesgue theory . . . . .	376
6. The space $L^1$ . . . . .	378

Index of symbols . . . . .	379
----------------------------	-----

Index of terms. . . . .	383
