CHAPTER I

CURVES IN SPACE

SECTION	PAGE
1. Curves and surfaces. The summation convention.....	1
2. Length of a curve. Linear element.....	8
3. Tangent to a curve. Order of contact. Osculating plane.....	11
4. Curvature. Principal normal. Circle of curvature.....	16
5. Binormal. Torsion.....	19
6. The Frenet formulas. The form of a curve in the neighborhood of a point.....	25
7. Intrinsic equations of a curve.....	31
8. Involutives and evolutes of a curve.....	34
9. The tangent surface of a curve. The polar surface. Osculating sphere.....	38
10. Parametric equations of a surface. Coordinates and coordinate curves in a surface.....	44
11. Tangent plane to a surface.....	50
12. Developable surfaces. Envelope of a one-parameter family of surfaces.....	53

CHAPTER II

TRANSFORMATION OF COORDINATES. TENSOR CALCULUS

13. Transformation of coordinates. Curvilinear coordinates.....	63
14. The fundamental quadratic form of space.....	70
15. Contravariant vectors. Scalars.....	74
16. Length of a contravariant vector. Angle between two vectors.....	80
17. Covariant vectors. Contravariant and covariant components of a vector.....	83
18. Tensors. Symmetric and skew symmetric tensors.....	89
19. Addition, subtraction and multiplication of tensors. Contraction.....	94
20. The Christoffel symbols. The Riemann tensor.....	98
21. The Frenet formulas in general coordinates.....	103
22. Covariant differentiation.....	107
23. Systems of partial differential equations of the first order. Mixed systems.....	114

CHAPTER III

INTRINSIC GEOMETRY OF A SURFACE

24. Linear element of a surface. First fundamental quadratic form of a surface. Vectors in a surface.....	123
25. Angle of two intersecting curves in a surface. Element of area.....	129
26. Families of curves in a surface. Principal directions.....	138
27. The intrinsic geometry of a surface. Isometric surfaces.....	146
28. The Christoffel symbols for a surface. The Riemannian curvature tensor. The Gaussian curvature of a surface.....	149

29. Differential parameters.....	155
30. Isometric orthogonal nets. Isometric coordinates.....	161
31. Isometric surfaces.....	166
32. Geodesics.....	170
33. Geodesic polar coordinates. Geodesic triangles.....	180
34. Geodesic curvature.....	186
35. The vector associate to a given vector with respect to a curve. Parallelism of vectors.....	194
36. Conformal correspondence of two surfaces.....	201
37. Geodesic correspondence of two surfaces.....	205

CHAPTER IV

SURFACES IN SPACE

38. The second fundamental form of a surface.....	212
39. The equation of Gauss and the equations of Codazzi.....	218
40. Normal curvature of a surface. Principal radii of normal curvature....	222
41. Lines of curvature of a surface.....	228
42. Conjugate directions and conjugate nets. Isometric-conjugate nets....	231
43. Asymptotic directions and asymptotic lines. Mean conjugate directions. The Dupin indicatrix.....	237
44. Geodesic curvature and geodesic torsion of a curve.....	243
45. Parallel vectors in a surface.....	249
46. Spherical representation of a surface. The Gaussian curvature of a surface.....	252
47. Tangential coordinates of a surface.....	260
48. Surfaces of center of a surface. Parallel surfaces.....	268
49. Spherical and pseudospherical surfaces.....	277
50. Minimal surfaces.....	288
Bibliography.....	296
Index.....	298
