

CONTENTS

Preface *page* ix

Notation xi

Chapter 1. INTRODUCTORY

1	Forms and their coefficients and variables	1
2	The matrix and discriminant of a quadratic form	2
3	The rank, signature and range of values of a quadratic form	3
4	Change of variables	5
5	Relations between forms	7
6	Rational diagonalization	9
7	Rational automorphs	11

Chapter 2. REDUCTION

1	The problem of reduction; the minimum	13
2	Binary forms	14
3	Representation of integers by binary forms	16
4	Completing the square; Hermite's method of reduction	17
5	Crude estimate for $\min f$; classes with given n, d	19
6	Zero forms	21
7	Representation of zero subject to congruence conditions	23
8	Reciprocal forms	25
9	Minkowski reduction of positive forms	27
10	Extreme forms	29
11	Perfect forms	30

Chapter 3. THE RATIONAL INVARIANTS

1	p -adic squares; the Legendre symbol	page 32
2	p -adic zero forms	33
3	The Hilbert symbol	35
4	Quadratic reciprocity	38
5	Necessary and sufficient conditions for representation of zero	41
6	The p -adic rational invariants $\epsilon_p(f)$	44
7	Necessary and sufficient conditions for rational relatedness	47

Chapter 4. p -ADIC EQUIVALENCE

1	Definition; invariance of $\epsilon_p(f)$	50
2	The case $p \nmid d$	51
3	The case $p \neq 2$	54
4	Conditions for p -adic equivalence	56
5	2-adic decomposition	58
6	A coarser p -adic decomposition	61
7	Quadratic congruences	62
8	A property of $\epsilon_p(f)$	65

Chapter 5. THE CONGRUENCE CLASS AND THE GENUS

1	Congruential equivalence	68
2	Construction of congruence class with prescribed properties	69
3	Semi-equivalence	72
4	Decomposition under congruential equivalence and semi-equivalence	74
5	Rational relations between semi-equivalent forms	76
6	Representation of integers	79
7	Representation by indefinite forms with $n \geq 4$	81

Chapter 6. RATIONAL TRANSFORMATIONS

1	Equivalence of rational matrices	<i>page</i> 84
2	Rational relations between semi-equivalent forms (further properties)	86
3	Successive rational transformations	89
4	Reflexions	92
5	Hermite's formula for the automorphs of a ternary form	95
6	Construction of automorphs	97
7	The norms of automorphs; improvement of Theorem 50	100

Chapter 7. EQUIVALENCE AND SPINOR-RELATEDNESS

1	The spinor genus	104
2	Some possible values for the weight of an automorph modulo d	107
3	A simpler congruence condition for spinor-related- ness	110
4	Decomposition	112
5	Representation of integers by a spinor genus	113
6	The exceptional integers of a ternary genus	116
7	Representation of integers by positive forms	121

Chapter 8. THE GENERAL RATIONAL AUTOMORPH

1	Factorization of automorphs into reflexions	123
2	Factorization into reflexions with odd denominators	125
3	Factorization of automorphs; further properties	126
4	The norms of rational automorphs	129

5	Cayley's formula for the general rational automorph with determinant 1	<i>page</i> 132
6	Integral automorphs	133
	<i>Notes</i>	135
	<i>References</i>	141
	<i>Index</i>	143
