

CONTENTS

Preface

page vii

Chapter I. INTRODUCTION

Chapter II. THE HOMOTOPY GROUPS

1. Definition of the absolute homotopy groups 5
2. Alternative descriptions of the homotopy groups 8
3. The role of the base-point; operation of $\pi_1^{-1}(Y, y_0)$ on $\pi_n(Y, y_0)$ 11
4. The relative homotopy groups 16

Chapter III. THE CLASSICAL THEOREMS OF HOMOTOPY THEORY

1. The simplicial approximation theorem 24
2. The Brouwer degree 25
3. The Hurewicz isomorphism theorem 30

Chapter IV. THE EXACT HOMOTOPY SEQUENCE

1. Definition of the sequence 34
2. Proof of exactness 35
3. Properties of the homotopy sequence 37
4. The group $\pi_2(Y, Y_0)$ 39
5. Special cases 41
6. The homotopy groups of the union of two spaces 42
7. The homotopy sequence of a triple 44

Chapter V. FIBRE-SPACES

1. Definitions and fundamental theorems 46
2. The Hopf fibrings 51
3. Fibre-spaces over spheres 55
4. Appendix on pseudo-fibre-spaces 63

CONTENTS

Chapter VI. THE HOPF INVARIANT AND SUSPENSION THEOREMS

1. The Hopf invariant	<i>page</i> 69
2. The Freudenthal suspension and its generalization	75
3. Application to fibre-spaces	84
4. The generalized Hopf invariant	90

Chapter VII. WHITEHEAD CELL-COMPLEXES

1. Definition of a cell-complex, and the basic properties of CW-complexes	95
2. The n -type of a complex and the Massey homology spectrum	100
3. Realizability theorems	106

Chapter VIII. HOMOTOPY GROUPS OF COMPLEXES

1. Statement of the problem	114
2. Whitehead's exact sequence	115
3. The homology system and the reduced complex	120
4. Normal complex of S. C. Chang	128
5. Appendix	133

<i>Bibliography</i>	134
