

CONTENTS

CHAPTER 1. PRELIMINARIES

1. Notations. Convex bodies	1
2. Ray sets and star bodies	14
3. Lattices	17
4. Algebraic Number fields	24

CHAPTER 2. CONVEX BODIES AND LATTICE POINTS

5. The fundamental theorem of Minkowski	32
6. Generalizations of the theorem of Blichfeldt	40
7. Generalizations of the theorem of Minkowski	43
8. A theorem of Rédei and Hlawka	47
9. Successive minima of a convex body	51
10. Reduction theory.	57
11. Successive minima of non-convex sets.	71
12. Extremal bodies	75
13. The inhomogeneous minimum	95
14. Polar reciprocal convex bodies	104
15. Compound convex bodies	111
16. Convex bodies and arbitrary lattices	120

CHAPTER 3. THE CRITICAL DETERMINANT, THE COVERING CONSTANT AND THE INHOMOGENEOUS DETERMINANT OF A SET

17. Mahler's selection theorem. Critical determinant and absolute homogeneous minimum. Critical lattices	123
18. The successive minima and the determinant of a set.	134
19. The theorem of Minkowski-Hlawka	145
20. Packing of convex bodies	164
21. Covering constant of a set. Covering by sets	174
22. Packings and coverings in the plane	187
23. Inhomogeneous determinant of a set	196
24. A theorem of Mordell-Siegel-Hlawka-Rogers	200

CHAPTER 4. STAR BODIES

25. The functionals $\Delta(S)$, $I(S)$, $f(A)$, $g(A)$	206
26. Points of critical lattices on the boundary. Automorphic star bodies	216
27. Reducible and irreducible star bodies	225
28. Reduction of automorphic star bodies	232

CHAPTER 5. SOME METHODS

29. The critical determinant of a two-dimensional star body. Methods of Mahler and Mordell	239
30. Some special two-dimensional domains	247
31. The critical determinant of an n -dimensional domain	249
32. Some special domains.	257
33. A method of Blichfeldt. Density functions.	261
34. A method of Blichfeldt and Mordell	266
35. A theorem of Macbeath.	276
36. Comparison of star bodies in spaces of unequal dimensions	281

CHAPTER 6. HOMOGENEOUS FORMS

37. Homogeneous forms, absolute minima, extreme forms	289
38. Spheres and quadratic forms.	293
39. Extreme positive definite quadratic forms	301
40. Sums of powers of linear forms	319
41. Products of linear forms	330
42. Other homogeneous forms.	340
43. Extreme forms. Isolated minima	349
44. Asymmetric and one-sided inequalities	373
45. Diophantine approximation	382

CHAPTER 7. INHOMOGENEOUS FORMS

46. Inhomogeneous minima of forms.	407
47. Indefinite binary quadratic forms.	410
48. Delone's algorithm. Lower bounds for $\mu(Q, Y)$	425
49. Inhomogeneous forms in more variables	436
50. Asymmetric inequalities.	453
51. Inequalities with infinitely many solutions	457
