	Page
PREFACE	i
TABLE OF CONTENTS	ii
CHAPTER I: THE THEORY OF WITT	
1.1 Bilinear forms and quadratic forms	1
1.2 Quadratic forms for characteristic not 2	6
1.3 Direct sum and orthogonal decomposition	11
1.4 Hyperbolic planes	17
1.5 Witt's theorem; Witt decomposition	21
1.6 The Grothendieck Ring and the Witt Ring	27
Appendix to Chapter I	37
CHAPTER II: THE THEORY OF PFISTER	
2.1 Multiplicative forms and applications to the structure of the Witt ring	38
2.2 The method of transfer	45
2.3 Pfister's local-global principle	53
2.4 Representation of definite functions as sums of squares	57
2.5 The theorems of Cassels. Fields of prescribed level.	62
Appendix to Chapter II	70
CHAPTER III: SIMPLE ALGEBRAS AND CLIFFORD ALGEBRAS	
3.1 Wedderburn theory	75
3.2 The Brauer group	80
3.3 The Clifford algebra	86
3.4 Quaternion algebras	96

CHAPTER III: Cont'd

3.5	The graded Brauer group. The Witt invariant and the Hasse invariant.	101
3.6	The Spin group and the spinor norm	108
	Appendix to Chapter III	116

CHAPTER IV: CLASSIFICATION THEORY

4.1	Resumé and general results	117
4.2	Quadratic forms over local fields	121
4.3	Fields with only one non-trivial quaternion algebra	127
4.4	Results from global class field theory	132
4.5	Quadratic forms over global fields. The Hasse-Minkowski theorem.	136
	Appendix to Chapter IV	146

APPENDIX:	QUADRATIC FORMS AND GALOIS COHOMOLOGY	149
