

Table of Contents

I. PRELIMINARIES ON ALGEBRAIC GROUPS	1
§1. Affine algebraic sets	1
1.1 Definitions	1
1.2 Rational mappings	4
§2. Affine algebraic groups	6
2.1 Definitions	6
2.2 Rational homomorphisms and quotient groups	9
2.3 Linear algebraic groups	12
2.4 Tori	14
§3. K/k forms	18
3.1 K/k forms and one-cocycles	18
3.2 Examples of K/k forms	22
3.3 Proof of Prop. 3.1.1	26
§4. The structure of algebraic groups	30
4.1 Semi-simple and unipotent elements	30
4.2 Solvable groups	31
4.3 Borel subgroups	33
4.4 Questions of rationality	36
II. GENERAL PRINCIPLES OF CLASSIFICATION	43
§1. Structure of semi-simple algebraic groups	43
1.1 The root system and the Weyl group	43
1.2 Fundamental systems and Weyl chambers	46
1.3 The fundamental theorem of Chevalley	51
1.4 Some consequences of the fundamental theorem of Chevalley	57
§2. Structure of semi-simple algebraic groups defined over k (k perfect)	65
2.1 Restricted roots	65
2.2 Structure of parabolic subgroups	73
2.3 The set \bar{V} is a root system in a wider sense	80
2.4 The fundamental theorem of classification	84

§3. Classification of semi-simple algebraic groups defined over k (k perfect)	98
3.1 Investigation of Γ -diagrams	98
3.2 Some special cases (finite fields)	104
3.3 The invariant $\Upsilon(G)$ and the classification over f -adic fields	110
3.4 Classification over the real field	123
3.5 Open questions (algebraic number fields)	126
 Bibliography	 127
Appendix: Classification over the real field, by Mitsuo Sugiura . .	128
 Foot-notes	 144
List of notation	147
Index of terms	148
