

CONTENTS

Preface	5
-------------------	---

INTRODUCTION

§ 1. Subject and method of analytic geometry	13
§ 2. One-dimensional Cartesian space	15
§ 3. Two-dimensional Cartesian space	16
§ 4. Three-dimensional Cartesian space	19
§ 5. Sets, functions, groups	22

PART ONE

CARTESIAN SPACES

CHAPTER I

POINTS AND VECTORS IN CARTESIAN SPACES

§ 6. Points of the space C_n	25
§ 7. Operations on points in the space C_n	27
§ 8. Operations on points and the distance. The centre of a pair of points	29
§ 9. Vectors	30
§ 10. Addition and subtraction of vectors	32
§ 11. Parallel vectors and the multiplication of a vector by a number	33
§ 12. Elementary isometries	34
§ 13. Straight lines and hyperplanes in Cartesian spaces	37
§ 14. Geometric characterization of translations	41
§ 15. Scalar product of vectors. Angle between vectors	43

CHAPTER II

LINEAR SETS IN CARTESIAN SPACES

§ 16. Linear sets	48
§ 17. Linear dependence of points	49
§ 18. Linear dependence of vectors	50
§ 19. Maximal linearly independent systems	52

§ 20. Algebraic determination of the maximal number of linearly independent vectors	55
§ 21. Orientation of a system of n linearly independent vectors of the space C_n . Oriented angle	59
§ 22. The discriminant of a system of points	63
§ 23. The equation of an $(n-1)$ -dimensional hyperplane in the space C_n	65

CHAPTER III

RELATIONS BETWEEN HYPERPLANES IN CARTESIAN SPACES

§ 24. Vectors perpendicular and parallel to a hyperplane	68
§ 25. Vector product	70
§ 26. The area of a triangle and the volume of a tetrahedron	73
§ 27. Distance from a point to an $(n-1)$ -dimensional hyperplane	75
§ 28. Mutual positions of a straight line and an $(n-1)$ -dimensional hyperplane in C_n	77
§ 29. Normal hyperplanes and symmetry with respect to a hyperplane	78
§ 30. Distance from a point to a k -dimensional hyperplane. Bisector of a pair of lines	80
§ 31. Parallel hyperplanes	84
§ 32. Intersection of two hyperplanes	85
§ 33. Determination of a k -dimensional hyperplane by a system of linear equations	87
§ 34. General position of two hyperplanes	88

CHAPTER IV

POLYHEDRA AND THEIR ELEMENTARY PROPERTIES

§ 35. Segment. Convex sets	92
§ 36. Halfspaces	94
§ 37. Interior and boundary	96
§ 38. Intersection of a hyperplane with a halfspace	98
§ 39. Cell	99
§ 40. Parallelepipeds	101
§ 41. Polyhedra	104
§ 42. Cartesian products	106
§ 43. Geometric complexes	109
§ 44. Simplexes	111
§ 45. Simplicial complexes	114
§ 46. The measure of a simplex and the measure of a polyhedron	116
§ 47. Vector product of a system of $n-1$ vectors of the space C_n	120

CHAPTER V

ISOMETRIC MAPPINGS OF CARTESIAN SPACES

§ 48. Homogeneity and perfect homogeneity of metric spaces	123
§ 49. Perfect homogeneity of Cartesian spaces	126
§ 50. Analytic form of isometries	129

§ 51. Ordinary and reflection isometries	133
§ 52. The concept of limit	134
§ 53. Rigid motions	135
§ 54. Change of the system of rectangular coordinates	139
§ 55. Change of the system of rectangular coordinates in the plane and in the space	142

CHAPTER VI

AFFINE MAPS OF CARTESIAN SPACES

§ 56. Similarities	147
§ 57. Affine maps	150
§ 58. Classification of concepts and theorems in geometry	153
§ 59. Affine invariants	156
§ 60. Oblique coordinates	157
§ 61. Oblique coordinates in the plane	160
§ 62. Contravariant and covariant vectors	161

CHAPTER VII

EXAMPLES OF PLANE CURVES

§ 63. Algebraic and transcendental figures in Cartesian spaces	165
§ 64. Curves with foci and directrices	167
§ 65. Parabola	168
§ 66. Ellipse	170
§ 67. Hyperbola	175
§ 68. Vertex and polar equations of the conics	180
§ 69. An example of a curve of third degree	183
§ 70. An example of a curve of the fourth degree	185
§ 71. An example of a transcendental curve	187

CHAPTER VIII

EXAMPLES OF SURFACES

§ 72. Surfaces of revolution	190
§ 73. Cylinders and cones	192
§ 74. Ellipsoid	196
§ 75. Hyperboloid of two sheets	200
§ 76. Hyperboloid of one sheet	203
§ 77. Elliptic paraboloid	208
§ 78. Hyperbolic paraboloid	210
§ 79. Surface of a torus	214

PART TWO

PROJECTIVE SPACES AND MÖBIUS SPACES

CHAPTER IX

POINTS AND LINES IN PROJECTIVE SPACES

§ 80. Homogeneous coordinates and improper points	217
§ 81. Projective spaces	218
§ 82. Geometry of projective spaces. Collineations and projective maps	221
§ 83. Equation of a projective line in the space P_n	222
§ 84. Linear maps	225
§ 85. Application of linear maps	227

CHAPTER X

HYPERPLANES IN PROJECTIVE SPACES

§ 86. Linear subsets of projective spaces	229
§ 87. Linear dependence of points in the space P_n	230
§ 88. Cartesian and projective hyperplanes	234
§ 89. Linear maps defined on finite sets of points	236
§ 90. Equation of an $(n-1)$ -dimensional hyperplane in P_n	238
§ 91. Systems of $(n-1)$ -dimensional hyperplanes in the space P_n	240

CHAPTER XI

THE ANHARMONIC RATIO AND PROJECTIVE MAPS

§ 92. Anharmonic ratio of a quadruple of points	243
§ 93. Elementary sense of the double ratio	246
§ 94. Anharmonic ratio of a quadruple of lines	248
§ 95. Harmonic quadruples and a complete quadrilateral	250
§ 96. Projective maps of a line and linear maps	253
§ 97. Projective mappings of the space P_n and linear maps	256
§ 98. Perspective maps. Orientability and non-orientability	259
§ 99. Projective coordinates	260

CHAPTER XII

ALGEBRAIC FIGURES IN PROJECTIVE SPACES

§ 100. Limit of a sequence of points in the space P_n	263
§ 101. Algebraic figures in the space P_n	266
§ 102. Improper points of algebraic figures	268
§ 103. Complete conics	270
§ 104. Complete quadrics	271
§ 105. Rectilinear generators of the quadrics	275

CHAPTER XIII

THE PRINCIPLE OF DUALITY

§ 106. Plücker coordinates. Duality in projective geometry	279
§ 107. Complete quadrangle	282
§ 108. Theorem of Desargues	283
§ 109. Pascal's theorem	287
§ 110. Tangents to a conic and Brianchon's theorem	289

CHAPTER XIV

MÖBIUS SPACES

§ 111. Spheres in Cartesian spaces	292
§ 112. Hyperplane as a limiting case of a sphere	295
§ 113. Stereographic projection	296
§ 114. Conformity of the stereographic projection	297
§ 115. Möbius spaces	299
§ 116. Images of spheres under the stereographic projection	300
§ 117. Spherical affinities	302
§ 118. Inversion	303
§ 119. Method of generating spherical affinities by inversions and similarities	305

PART THREE

COMPLEX SPACES

CHAPTER XV

GENERAL PROPERTIES OF COMPLEX SPACES

§ 120. Points of complex spaces	307
§ 121. Geometry of the space \mathbb{C}_n	309
§ 122. Affine notions in the space \mathbb{C}_n	312
§ 123. Metric concepts in the space \mathbb{C}_n	315
§ 124. Geometry of the space \mathbb{P}_n	318
§ 125. Lines and hyperplanes in the space \mathbb{P}_n	319
§ 126. Isotropic directions	322

CHAPTER XVI

EQUATIONS OF ALGEBRAIC FIGURES IN COMPLEX SPACES

§ 127. Algebraic figures in the space \mathbb{C}_n	327
§ 128. Algebraic figures in the space \mathbb{P}_n	327
§ 129. Intersection of an algebraic figure in \mathbb{P}_n with a hyperplane	330
§ 130. $(n-1)$ -dimensional hyperplanes contained in an algebraic figure of the space \mathbb{P}_n	331
§ 131. Improper points of algebraic figures	332
§ 132. Uniqueness of the equation of a figure of the second degree	336
§ 133. Determination of a figure of the second degree by a finite system of points	338

CHAPTER XVII

GENERAL PROPERTIES OF FIGURES OF THE SECOND DEGREE

§ 134. Tangents to figures of the second degree. Ordinary and singular points	344
§ 135. Tangent hyperplanes	349
§ 136. Asymptotic hyperplanes, singular and special directions	353
§ 137. Poles and polars	355
§ 138. Diametral hyperplanes	358
§ 139. Centres	361
§ 140. Symmetry with respect to a centre	362
§ 141. Diameters	365
§ 142. Conjugate diameters and systems of Apollonius	366
§ 143. Theorem of Apollonius	368
§ 144. Principal directions	373

CHAPTER XVIII

FOUNDATIONS OF CLASSIFICATION OF FIGURES OF THE SECOND DEGREE

§ 145. Great discriminant	376
§ 146. Small discriminant	378
§ 147. Characteristic polynomial	380
§ 148. Invariance of the characteristic polynomial	382
§ 149. Signs of the characteristic roots for $n = 2$ and $n = 3$	384
§ 150. Pseudocharacteristic polynomial	385
§ 151. Canonical form of an equation of the second degree (theorem on reduction)	388
§ 152. Reduction of a quadratic equation to a canonical form (the proof of the theorem on reduction)	390
§ 153. Corollaries to the theorem on reduction	394
§ 154. Parabolic vertices	398

CHAPTER XIX

CLASSIFICATION OF FIGURES OF THE SECOND DEGREE

§ 155. Complete system of metric invariants for real figures of the second degree with proper centres	401
§ 156. Complete system of metric invariants for real figures of the second degree without proper centres	404
§ 157. Projective and affine indices	407
§ 158. Projective classification of figures of the second degree	411
§ 159. Affine classification of figures of the second degree	415
§ 160. Affine classification of curves of the second degree	419
§ 161. Affine classification of surfaces of the second degree	421
§ 162. Rectilinear generators	425
§ 163. Projective homogeneity of figures of the second degree	428
§ 164. Real rectilinear generators	430
Index of symbols	433
Index of authors	437
Subject index	439
