

TABLE OF CONTENTS

	Page
<u>Chapter 0</u> : <u>Preliminaries.</u>	1
2. Forms.	6
3. Integration.	10
4. a) Double tangent bundle.	15
b) Vertical vectors.	17
c) The canonical involution on $T(T(M))$	19
d) Another vector bundle structure on $T(T(M))$	20
e) The canonical forms and d	21
5. Curves.	22
6. Flows.	25
<u>Chapter I</u> : <u>Sprays.</u>	28
1. Definition.	28
2. Geodesics.	30
3. Expression for the spray in local coordinates.	32
4. The exponential map.	34
<u>Chapter II</u> : <u>Linear Connections.</u>	37
1. Linear connection.	37
2. Connections in terms of the local coordinates.	41
3. Covariant derivation.	43
4. The derivation law.	48
5. Curvature.	52
6. Convexity	60
7. Parallel transport.	65
8. Jacobi fields.	70

<u>Chapter III</u>	: <u>Riemannian manifolds.</u>	81
	2. Examples.	86
	3. Symmetric pairs.	88
	4. The S.C.-manifolds.	95
	5. Volumes.	101
	6. The canonical forms and d	106
	7. The unit bundle.	111
	8. Expressions in local coordinates.	112
<u>Chapter IV</u>	: <u>Geodesics.</u>	114
	1. The first variation.	114
	2. The canonical spray.	117
	3. First consequences from the definition.	123
	4. Geodesics in a symmetric pair.	125
	5. Geodesics in S.C.-manifolds.	127
	6. Results of Samelson and Bott.	131
	7. Expressions for G in local coordinates.	141
	8. Zoll's surface.	145
<u>Chapter V</u>	: <u>Canonical connection.</u>	155
	2. Riemannian structures on $T(M)$ and $U(M)$	161
	3. $Dg = 0$	168
	4. Consequences of $Dg = 0$	170
	5. Curvature tensor.	173
	6. Jacobi fields in an r.m.	175

<u>Chapter VI</u>	: <u>Sectional curvature.</u>	183
	2. Examples.	185
	3. Geometric interpretation.	189
	4. A criterion for local isometry.	191
	5. Jacobi fields in symmetric pairs...	199
	6. Sectional curvature of S.C.-manifolds.	201
	7. Volumes of S.C.-manifolds.	204
	8. Ricci and scalar curvature.	211
<u>Chapter VII</u>	: <u>The metric structure.</u>	218
	1. Identity of balls.	218
	2. The metric structure.	225
	3. Nice balls.	227
	4. Hopf-Rinow theorem.	234
	5. A covering criterion.	239
	6. Closed geodesics.	243
	7. Manifolds with constant sectional curvature.	251
<u>Chapter VIII</u>	: <u>Some formulas and applications.</u>	254
	1. The second variation formula.	254
	2. Second variation versus Jacobi fields.	259
	3. Synge and Myers theorems.	265
	4. A formula.	270
	5. Index of a vector field.	277
	6. Gauss-Bonnet formula.	279
	7. E. Hopf theorem.	285

8. Another formula.	286
9. L.W. Green theorem.	292
10. Concerning G-spaces.	296
11. Conformal representation.	299
12. The theorems of Loewner and Pu	303
