CHAPTER I. INTRODUCTORY

Art. 1. Standard form for two quadratics 1
2. Numerical examples 2
3. Classification by the aid of a determinant . . . 3
Examples 4

CHAPTER II. A SINGLE QUADRATIC FORM

Art. 4. Preliminary Lemma 6
5. Rank of a quadratic form 8
6. A general method of transformation 9
Thomson's and Bertrand's theorems 11
7. Special transformations. 12
8. Reduction to a sum of squares 15
Examples 17
9. Positive forms and Sylvester's law of inertia . . 19
10. Effect of a linear substitution on the determinant of a quadratic form 22

CHAPTER III. A FAMILY OF QUADRATIC FORMS

Art. 11. Invariant-factors and Kronecker's invariants . . 26
12. Invariant-factors are invariant 30
13. Reduction of a family in three variables . . . 30
14, 15. Standard types in three variables 36
16. Examples of reduction 38
17. Reduction of a family in four variables . . . 40
18. Standard types in four variables 46
19. Examples of reduction 49

PAGE

Art. 20. General discussion of reduction 50
21. Invariants in the singular case 55
22. Example of reduction 58
23. Characteristics for forms containing more than four variables 59

CHAPTER IV. THEOREMS ON THE INVARIANT-FACTORS OF A FAMILY OF QUADRATIC FORMS

Art. 24. Invariant-factors of a composite family are equal to those of the component parts 61
25. Regular minors 63
26, 27. Sylvester's and Weierstrass's theorems, etc. . . 64
28. Klein's theorem, etc. 68

CHAPTER V. APPLICATIONS AND REFERENCES

Art. 29, 30. Conics and quadrics in point coordinates . . . 71
31, 32. Conics and quadrics in tangential coordinates . . 79
33. Other applications to conics and quadrics . . . 82
34. Bicircular quartics. 83
35. Cyclides 86
36. Quadratic line-complexes 89
37. Small oscillations about a position of equilibrium . 90
38. References 95

APPENDIX

Geometrical interpretation of Art. 7 98
