Introduction	1
Leitfaden	2
Part One	
LOCAL FIELDS (BASIC FACTS)	
Chapter I	
Discrete Valuation Rings and Dedekind Domains	5
§1. Definition of Discrete Valuation Ring	5
§2. Characterisations of Discrete Valuation Rings	7
§3. Dedekind Domains	9
§4. Extensions	13
§5. The Norm and Inclusion Homomorphisms	15
§6. Example: Simple Extensions	17
§7. Galois Extensions	20
§8. Frobenius Substitution	23
Chapter II	
Completion	26
§1. Absolute Values and the Topology Defined by a Discrete Valuation	26
§2. Extensions of a Complete Field	28
§3. Extension and Completion	30
§4. Structure of Complete Discrete Valuation Rings I: Equal Characteristic Case	32
§5. Structure of Complete Discrete Valuation Rings II: Unequal Characteristic Case	36
§6. Witt Vectors	40

Part Two

RAMIFICATION

Chapter III

Discriminant and Different 47

§1. Lattices 47

§2. Discriminant of a Lattice with Respect to a Bilinear Form 48

§3. Discriminant and Different of a Separable Extension 50

§4. Elementary Properties of the Different and Discriminant 51

§5. Unramified Extensions 53

§6. Computation of Different and Discriminant 55

§7. A Differential Characterisation of the Different 59

Chapter IV

Ramification Groups 61

§1. Definition of the Ramification Groups; First Properties 61

§2. The Quotients G_i/G_{i+1} , $i \geq 0$ 65§3. The Functions ϕ and ψ ; Herbrand's Theorem 73§4. Example: Cyclotomic Extensions of the Field \mathbf{Q}_p 77

Chapter V

The Norm 80

§1. Lemmas 80

§2. The Unramified Case 81

§3. The Cyclic of Prime Order Totally Ramified Case 83

§4. Extension of the Residue Field in a Totally Ramified Extension 87

§5. Multiplicative Polynomials and Additive Polynomials 90

§6. The Galois Totally Ramified Case 91

§7. Application: Proof of the Hasse-Arf Theorem 93

Chapter VI

Artin Representation 97

§1. Representations and Characters 97

§2. Artin Representation 99

§3. Globalisation 103

§4. Artin Representation and Homology (for Algebraic Curves) 105

Part Three

GROUP COHOMOLOGY

Chapter VII 109

Basic Facts

§1. G -Modules 109

§2. Cohomology 111

§3. Computing the Cohomology via Cochains 112

§4. Homology	114
§5. Change of Group	115
§6. An Exact Sequence	117
§7. Subgroups of Finite Index	118
§8. Transfer	120
Appendix	
Non-abelian Cohomology	123
Chapter VIII	
Cohomology of Finite Groups	127
§1. The Tate Cohomology Groups	127
§2. Restriction and Corestriction	129
§3. Cup Products	131
§4. Cohomology of Finite Cyclic Groups. Herbrand Quotient	132
§5. Herbrand Quotient in the Cyclic of Prime Order Case	134
Chapter IX	
Theorems of Tate and Nakayama	138
§1. p -Groups	138
§2. Sylow Subgroups	139
§3. Induced Modules; Cohomologically Trivial Modules	141
§4. Cohomology of a p -Group	142
§5. Cohomology of a Finite Group	144
§6. Dual Results	146
§7. Comparison Theorem	147
§8. The Theorem of Tate and Nakayama	148
Chapter X	
Galois Cohomology	150
§1. First Examples	150
§2. Several Examples of "Descent"	152
§3. Infinite Galois Extensions	154
§4. The Brauer Group	155
§5. Comparison with the Classical Definition of the Brauer Group	157
§6. Geometric Interpretation of the Brauer Group: Severi-Brauer Varieties	160
§7. Examples of Brauer Groups	161
Chapter XI	
Class Formations	164
§1. The Notion of Formation	164
§2. Class Formations	166
§3. Fundamental Classes and Reciprocity Isomorphism	168
§4. Abelian Extensions and Norm Groups	171
§5. The Existence Theorem	173
Appendix	
Computations of Cup Products	176

Part Four

LOCAL CLASS FIELD THEORY

Chapter XII

Brauer Group of a Local Field 181

§1. Existence of an Unramified Splitting Field 181

§2. Existence of an Unramified Splitting Field (Direct Proof) 182

§3. Determination of the Brauer Group 184

Chapter XIII

Local Class Field Theory 188

§1. The Group \hat{Z} and Its Cohomology 188

§2. Quasi-Finite Fields 190

§3. The Brauer Group 192

§4. Class Formation 195

§5. Dwork's Theorem 199

Chapter XIV

Local Symbols and Existence Theorem 204

§1. General Definition of Local Symbols 204

§2. The Symbol (a, b) 205§3. Computation of the Symbol $(a, b)_v$ in the Tamely Ramified Case 209§4. Computation of the Symbol $(a, b)_v$ for the Field \mathbf{Q}_p ($n = 2$) 211§5. The symbols $[a, b]$ 214

§6. The Existence Theorem 218

§7. Example: The Maximal Abelian Extension of \mathbf{Q}_p 220

Appendix

The Global Case (Statement of Results) 221

Chapter XV

Ramification 223

§1. Kernel and Cokernel of an Additive (resp. Multiplicative) Polynomial 223

§2. The Norm Groups 226

§3. Explicit Computations 229

Bibliography 232

Supplementary Bibliography for the English Edition 235
