

Introduction

Notations and conventions

Chapter I. Geometry of the affine line

Section 1. Locally nilpotent derivations

Section 2. Algebraic pencils of affine lines

Section 3. Algebraic characterizations of the affine plane

Section 4. Flat fibrations by the affine line

Section 5. Classification of affine \mathbb{A}^1 -bundles over a curve

Section 6. Locally nilpotent derivations in connection with the cancellation problem

Chapter II. Curves on an affine rational surface

Section 1. Irreducibility theorem

Section 2. Linear pencils of rational curves

Section 3. Automorphism theorem

Section 4. Finiteness theorem

Section 5. Simple birational extensions of a polynomial ring $k[x, y]$

Section 6. Certain affine plane curves with two places at infinity

Chapter III. Unirational surfaces

Section 1. Review on forms of the affine line over a field

Section 2. Unirational quasi-elliptic surfaces

Section 3. Unirational surface with a pencil of quasi-hyperelliptic curves of genus 2 (in characteristic 5)
