

Contents

1. Introduction.....	1
2. Representations of $SU(2)$	4
3. The general theory of linear representations of compact groups.....	9
4. Lie theory of representations of compact connected Lie groups.....	15
5. Induced representations of compact groups.....	17
6. Spherical functions on compact groups.....	18
7. Examples; spherical harmonics.....	21
8. The general theory of spherical functions.....	25
9. Fourier and Plancherel transforms.....	30
10. Extension of the Plancherel transform.....	34
11. The subtleties of harmonic analysis.....	37
12. Differential properties of spherical functions on Lie groups.....	40
13. Spherical functions on semisimple Lie groups.....	42
14. More on $SL(2, \mathbf{R})$	45
15. Automorphic functions.....	53
16. Groups of isometries and Bessel functions.....	55
17. Other special functions.....	58
References.....	59
