## INTRODUCTION

### CHAPTER I.    A THEORY OF MELLIN TRANSFORMATIONS

§ 1. Generalities	...	...	4
§ 2. Asymptotic expansions	...	...	7
§ 3. The classical case	...	...	10
§ 4. The case of the $\mathbb{R}$ -fields	...	...	19
§ 5. The case of $p$ -fields	...	...	32
Appendix : Poisson formula of Hecke type..			41

### CHAPTER II.    DUAL ASYMPTOTIC EXPANSIONS

§ 1. Fourier transforms of quasi-characters			52
§ 2. The space $(\omega_1^{-1}\mathfrak{F})^*$	...	...	62
§ 3. The space $(\omega_1^{-1}\mathfrak{F})^* \cap L^1(K)$ .	...	...	69

### CHAPTER III.    LOCAL ARITHMETIC THEORY OF FORMS OF HIGHER DEGREE

§ 1. Three functions : $F_{\mathfrak{F}}$ , $F_{\mathfrak{F}}^*$ , $Z_{\mathfrak{F}}$	...		73
§ 2. Preparations for the proof of the "main theorem"	...	...	84
§ 3. Proof of Theorem 1.6 for $p$ -fields	...		91
§ 4. Proof of Theorem 1.6 for $\mathbb{R}$ -fields	...		98
Appendix : Generalised gaussian sums and singular series (local case)			109

### CHAPTER IV.    POISSON FORMULA OF SIEGEL-WEIL TYPE

§ 1. Formulation of a Poisson formula	...		115
§ 2. Criteria for the validity of the Poisson formula and applications...	...	...	122

CHAPTER IV. (Contd)

§ 3.	The Siegel formula	...	...	127
§ 4.	Other Siegel formulas	...	...	137
§ 5.	Siegel's main theorem for quadratic forms			143
§ 6.	Proof of the criterion for the validity of the Poisson formula	...	...	154
