### Chapter 1. Quadratic forms over a field.

1. Quadratic forms.	1
2. Quadratic spaces.	5
3. Diagonalization.	7
4. Elementary properties of isometry.	10
5. Witt cancellation.	14
6. The quaternionic structure associated to $F$ .	17
7. Quaternion algebras.	20
8. The natural embedding of $Q(F)$ into $Br(F)$ .	25

### Chapter 2. Quaternionic structures and their associated Witt rings.

1. Quaternionic structures.	28
2. The associated form theory.	30
3. Representation of elements of $G$ by forms.	36
4. The Witt ring.	38
5. Some examples.	41

### Chapter 3. The Fundamental Ideal.

1. Pfister forms.	44
2. The fundamental ideal.	46
3. The quotient $I/I^2$ .	48
4. The Hasse invariant.	50
5. The quotient $I^2/I^3$ .	53
6. Local fields.	56
7. The Arason Pfister property.	59

### Chapter 4. Abstract Witt Rings.

1. An equivalence of categories.	62
2. Finiteness conditions.	71
3. Signatures and orderings.	74
4. The local-global property of Pfister.	76
5. Prime ideals and the nilradical.	80
6. Units.	83
7. Pfister quotients.	85
8. Reduced Witt rings.	88

### Chapter 5. Structure of finitely generated Witt Rings.

1. A partial operation of $Q_R$ .	92
2. The structure of skew-symmetric bilinear mappings.	94
3. Witt rings of local type.	95
4. Direct products.	99
5. The normalized decomposition.	102
6. A decomposition criterion.	107

7. Group rings.	111
8. The basic part of a Witt ring.	114
9. Basic indecomposable Witt rings.	119
10. Witt rings with $ G_R  < \infty$ , $ Q_R  \leq 4$ .	125
11. The case $ Q_R(a)  \leq 4 \quad \forall a \in G_R$ .	133
12. Values achieved by $ Q_R $ in the interval $[1, 16]$ .	137

### Chapter 6. Finitely generated reduced Witt Rings.

1. Elementary results.	141
2. The group $\text{gr}(X_R)$ .	144
3. Saturated sets in $X_R$ .	147
4. The saturated sets $X_\alpha$ , $\alpha \in \chi(G_R)$ .	152
5. Some technical lemmas.	153
6. The component decomposition.	159
7. The structure theorem.	162

### Chapter 7. Representation of reduced Witt rings.

1. The topology in $X_R$ .	169
2. The total signature.	173
3. The representation theorem.	176
4. The representation theorem (alternative forms).	183
5. Stability.	187
6. Representation of $G_R$ .	190
7. Witt rings satisfying SAP.	192

### Chapter 8. Sheaves of Reduced Witt rings.

1. Sheaves.	194
2. A topological construction.	200
3. Construction of the sheaf.	203
4. Sheaf representations of Witt rings.	208
5. Connected components revisited.	214
6. Reduced Witt rings with $X_R$ having only finitely many accumulation points.	217
7. More general types of reduced Witt rings.	219
8. A problem concerning $I_R$ .	222

### Chapter 9. A Local-Global Principle for Isotropy.

1. The statement of the isotropy principle.	226
2. The proof in case $\text{st}(R) < \infty$ .	229
3. Concluding remarks.	234

## Chapter 10. Quadratic forms over semi-local rings.

- |   |     |
|---|-----|
| 1. Elementary properties of semi-local rings. | 237 |
| 2. Quadratic forms.                           | 241 |
| 3. Isotropic forms.                           | 244 |
| 4. An inductive description of isometry.      | 248 |
| 5. The associated quaternionic structure.     | 251 |
