

Contents

Introduction	ix
Chapter 1	
Distributions on Toroidal Groups	1
§1. The Cartan Group	2
§2. Distributions	4
§3. Stickelberger Distributions	8
§4. Lifting Distributions from \mathbf{Q}/\mathbf{Z}	11
§5. Bernoulli-Cartan Numbers	12
§6. Universal Distributions	17
Chapter 2	
Modular Units	24
§1. The Klein Forms and Siegel Functions	25
§2. Units in the Modular Function Field	34
§3. The Siegel Units as Universal Distribution	37
§4. The Precise Distribution Relations	42
§5. The Units over \mathbf{Z}	48
§6. The Weierstrass Units	50
Chapter 3	
Quadratic Relations	58
§1. Formal Quadratic Relations	58
§2. The Even Primitive Elements	62
§3. Weierstrass Forms	66
§4. The Klein Forms	68
§5. The Siegel Group	75
Chapter 4	
The Siegel Units Are Generators	81
§1. Statement of Results	81
§2. Cyclotomic Integers	84

§3. Remarks on q -Expansions	87
§4. The Prime Power Case	90
§5. The Composite Case	94
§6. Dependence of Δ	103
§7. Projective Limits	104

Chapter 5

The Cuspidal Divisor Class Group on $X(N)$	110
§1. The Stickelberger Ideal	111
§2. The Prime Power Case, $p \geq 5$	115
§3. Computation of the Order	118
§4. Eigencomponents at Level p	122
§5. p -Adic Orders of Character Sums	126
§6. Proof of the Theorems	131
§7. The Special Group	133
§8. The Special Group Disappears on $X_1(p)$	140
§9. Projective Limits	141

Chapter 6

The Cuspidal Divisor Class Group on $X_1(N)$	146
§1. Index of the Stickelberger Ideal	147
§2. The p -Primary Part at Level p	151
§3. Part of the Cuspidal Divisor Class Group on $X_1(N)$	152
§4. Computation of a Class Number	159
§5. Projective Limits	165
§6. Projective Limit of the Trivial Group	168

Chapter 7

Modular Units on Tate Curves	172
§1. Specializations of Divisors and Functions at Infinity	173
§2. Non-Degeneracy of the Units	181
§3. The Value of a Gauss Sum	186

Chapter 8

Diophantine Applications	190
§1. Integral Points	190
§2. Correspondence with the Fermat Curve	193
§3. Torsion Points	197

Chapter 9	
Unramified Units	211
§1. The Invariants $\delta(c, c')$	211
§2. The Index of the Siegel Group	213
§3. The Robert Group	214
§4. Lemmas on Roots of Unity	216
§5. A Refined Index	218
Chapter 10	
More Units in the Modular Function Field	224
§1. Transformation of the Klein Forms	224
§2. Klein Forms and Weierstrass Functions	227
§3. More Expressions for Modular Units	229
Chapter 11	
Siegel–Robert Units in Arbitrary Class Fields	233
§1. Siegel–Ramachandra Invariants as Distributions	233
§2. Stickelberger Elements	241
§3. Ideal Factorization of the Siegel Numbers	246
§4. The Robert Group in the Ray Class Field	252
§5. Taking Roots	260
§6. The Robert Group under the Norm Map	266
Chapter 12	
Klein Units in Arbitrary Class Fields	269
§1. The Klein Invariants	269
§2. Behavior under the Artin Automorphism	277
§3. Modular Units in $K(1)$ as Klein Units	285
§4. Modular Units in $K(\mathfrak{f})$ as Klein Units	298
§5. A Description of $E_{\text{mod}}(K(\mathfrak{f}))^{12hwN(\mathfrak{f})}$	303
Chapter 13	
Computation of a Unit Index	311
§1. The Regulator Map and the Inertia Group	311
§2. An Index Computation	317
§3. Freeness Results	321

§4. The Index ($E_H: E_{\text{mod}}(H)$)	323
§5. More Roots of Unity Lemmas	327
§6. Proof of Theorem 4.2	329
Appendix	
The Logarithm of the Siegel Functions	339
Bibliography	351
Index	357
