

## CONTENTS

### Part I. Existence of characters for the discrete series.

§1. Square-integrable representations mod $Z$ .	4
§2. Reductive $p$ -adic groups.	8
§3. Supercuspidal representations.	9
§4. A conjecture.	10

### Part II. Existence of characters in the general case.

§1. The Godement principle.	12
§2. A theorem of Bruhat and Tits.	15
§3. Proof of Theorem 4 (based on Conjecture I).	16

### Part III. Supercusp forms and supercuspidal representations.

§1. The space generated by a supercusp form.	20
§2. Some consequences.	26

### Part IV. The space $\mathcal{A}(G, \tau)$ .

§1. Conjecture III.	30
§2. The space $\mathcal{A}(G, \tau)$ .	31
§3. Proof of Theorem 7.	38
§4. Proof of Theorem 8.	39

### Part V. The behavior of the characters of the supercuspidal representations on the regular set.

§1. Two fundamental theorems.	43
§2. $p$ -Adic manifolds and distributions.	48
§3. Invariant distributions on the regular set.	51
§4. Applications to the characters of the supercuspidal representations.	57

### Part VI. The mapping "F" (char $\Omega = 0$ ).

§1. Introduction and elementary properties of the mapping " $\Phi_f$ ".	63
§2. The first step in the proof of Theorem 13.	68
§3. Some algebraic lemmas on nilpotent elements.	71
§4. A submersive map.	72
§5. Some more preparation.	76
§6. The second step in the proof of Theorem 13.	78
§7. Completion of the proof of Theorem 13.	81
§8. Lifting of Theorem 13 to the group.	82

Part VII. The local summability of  $|D|^{-\frac{1}{2}-\varepsilon}$  (char  $\Omega = 0$ ).

- |  |    |
|--|----|
| §1. Statement of Theorem 15. Reduction to the Lie algebra. | 86 |
| §2. Proof of the main lemma.                               | 90 |

Part VIII. The local summability of the characters of the supercuspidal representations (char  $\Omega = 0$ ).

- |   |     |
|---|-----|
| §1. The main theorem and its consequences.                            | 92  |
| §2. Statement of the preparatory results for the proof of Theorem 16. | 95  |
| §3. Proof of the main theorem.  | 98  |
| §4. Proof of Lemma 46.  | 103 |
| §5. Proof of Theorem 18 (first step).                                 | 106 |
| §6. Proof of Theorem 19.  | 108 |
| §7. Proof of Theorem 18 (second step).                                | 114 |
| §8. Proof of Theorem 20.  | 116 |
