

CONTENTS

- § 1. Introduction
- § 2. Information about ANR-spaces
- § 3. Fundamental sequences
- § 4. Fundamental sequences in metrizable spaces
- § 5. Fundamental equivalence and fundamental domination. The notion of shape
- § 6. Homology properties of shape
- § 7. Homologous fundamental sequences
- § 8. Shapes of components of a compactum
- § 9. Shapes of plane continua
- § 10. Shapes of plane compacta
- § 11. On shapes of some decomposition spaces
- § 12. Movable spaces
- § 13. Solenoids are not movable
- § 14. Cartesian product of movable spaces
- § 15. Components of movable compacta
- § 16. Movability of plane sets
- § 17. Extensions of fundamental sequences
- § 18. Fundamental retractions
- § 19. Fundamental deformation retracts
- § 20. The chimney lemma
- § 21. Homotopy extension theorem
- § 22. Fundamental absolute retracts and fundamental absolute neighborhood retracts
- § 23. Cartesian product of compact FAR-spaces and FANR-spaces
- § 24. On the union of two FANR-spaces
- § 25. Some properties of compact FAR-spaces and FANR-spaces
- § 26. Shape invariance of compact FAR-spaces and FANR-spaces
- § 27. A property of compact FAR-spaces

- § 28. Pointed sequences
- § 29. Approximative maps
- § 30. Approximative maps of pointed spheres
- § 31. Fundamental groups
- § 32. Homomorphisms of fundamental groups induced
by pointed classes
- § 33. Addition of pointed shapes
- § 34. Multiplication of pointed shapes
