PREFACE	v
LIST OF SPECIAL SYMBOLS AND ABBREVIATIONS	xii
CHAPTER I. MAIN PROBLEM AND PRELIMINARY NOTIONS	1
1. Introduction	1
2. The extension problem	1
3. The method of algebraic topology	3
4. The retraction problem	5
5. Combined maps	7
6. Topological identification	8
7. The adjunction space	9
8. Homotopy problem and classification problem	11
9. The homotopy extension property	13
10. Relative homotopy	15
11. Homotopy equivalences.	17
12. The mapping cylinder	18
13. A generalization of the extension problem	20
14. The partial mapping cylinder	21
15. The deformation problem	22
16. The lifting problem.	24
17. The most general problem	25
Exercises.	25
CHAPTER II. SOME SPECIAL CASES OF THE MAIN PROBLEMS	35
1. Introduction	35
2. The exponential map $p: R \rightarrow S^1$	35
3. Classification of the maps $S^1 \rightarrow S^1$	37
4. The fundamental group	39
5. Simply connected spaces	42
6. Relation between $\pi_1(X, x_0)$ and $H_1(X)$	44
7. The Brusclinsky group.	47
8. The Hopf theorems.	52
9. The Hurewicz theorem	56
Exercises	57
CHAPTER III. FIBER SPACES	61
1. Introduction	61
2. Covering homotopy property	61

3. Definition of fiber space	62
4. Bundle spaces	65
5. Hopf fiberings of spheres	66
6. Algebraically trivial maps $X \rightarrow S^2$	68
7. Liftings and cross-sections	69
8. Fiber maps and induced fiber spaces	71
9. Mapping spaces	73
10. The spaces of paths	78
11. The space of loops	79
12. The path lifting property	82
13. The fibering theorem for mapping spaces	83
14. The induced maps in mapping spaces	85
15. Fiberings with discrete fibers	86
16. Covering spaces	89
17. Construction of covering spaces	93
Exercises	97

CHAPTER IV. HOMOTOPY GROUPS 107

1. Introduction	107
2. Absolute homotopy groups	107
3. Relative homotopy groups	110
4. The boundary operator	112
5. Induced transformations	113
6. The algebraic properties	114
7. The exactness property	115
8. The homotopy property	117
9. The fibering property	118
10. The triviality property	119
11. Homotopy systems	119
12. The uniqueness theorem	121
13. The group structures	123
14. The role of the basic point	125
15. Local system of groups	129
16. n -Simple spaces	131
Exercises	135

CHAPTER V. THE CALCULATION OF HOMOTOPY GROUPS . 143

1. Introduction	143
2. Homotopy groups of the product of two spaces	143
3. The one-point union of two spaces	145
4. The natural homomorphisms from homotopy groups to homology groups	146
5. Direct sum theorems	150
6. Homotopy groups of fiber spaces	152

7. Homotopy groups of covering spaces	154
8. The n -connective fiberings	155
9. The homotopy sequence of a triple	159
10. The homotopy groups of a triad	160
11. Freudenthal's suspension	162
Exercises	164
CHAPTER VI. OBSTRUCTION THEORY	175
1. Introduction	175
2. The extension index	175
3. The obstruction $c^{n+1}(g)$	176
4. The difference cochain	178
5. Eilenberg's extension theorem	180
6. The obstruction sets for extension	181
7. The homotopy problem	182
8. The obstruction $d^n(f, g; h_t)$	183
9. The group $R^n(K, L; f)$	184
10. The obstruction sets for homotopy	185
11. The general homotopy theorem	186
12. The classification problem	187
13. The primary obstructions	188
14. Primary extension theorems	190
15. Primary homotopy theorems	191
16. Primary classification theorems	191
17. The characteristic element of Y	193
Exercises	193
CHAPTER VII. COHOMOTOPY GROUPS	205
1. Introduction	205
2. The cohomotopy set $\pi^m(X, A)$	205
3. The induced transformations	206
4. The coboundary operator	208
5. The group operation in $\pi^m(X, A)$	209
6. The cohomotopy sequence of a triple	214
7. An important lemma	216
8. The statement (6)	219
9. The statement (5)	220
10. Higher cohomotopy groups	222
11. Relations with cohomology groups	222
12. Relations with homotopy groups	224
Exercises	226
CHAPTER VIII. EXACT COUPLES AND SPECTRAL	
SEQUENCES	229
1. Introduction	229

2. Differential groups	229
3. Graded and bigraded groups	231
4. Exact couples	232
5. Bigraded exact couples	234
6. Regular couples	236
7. The graded groups $R(\mathcal{C})$ and $S(\mathcal{C})$	238
8. The fundamental exact sequence	240
9. Mappings of exact couples	242
10. Filtered differential groups	244
11. Filtered graded differential groups	245
12. Mappings of filtered graded d -groups	248
Exercises.	249

CHAPTER IX. THE SPECTRAL SEQUENCE OF A FIBER SPACE 259

1. Introduction	259
2. Cubical singular homology theory	259
3. A filtration in the group of singular chains in a fiber space	262
4. The associated exact couple	263
5. The derived couple	266
6. Homology with arbitrary coefficients	269
7. The spectral homology sequence	271
8. Proof of Lemma A	272
9. Proof of Lemma B	274
10. Proof of Lemmas C and D	275
11. The Poincaré polynomials	277
12. Gysin's exact sequences	280
13. Wang's exact sequences	282
14. Truncated exact sequences	284
15. The spectral sequence of a regular covering space	285
16. A theorem of P. A. Smith	287
17. Influence of the fundamental group on homology and cohomology groups	288
18. Finite groups operating freely on S^r	290
Exercises.	292

CHAPTER X. CLASSES OF ABELIAN GROUPS 297

1. Introduction	297
2. The definition of classes	297
3. The primary components of abelian groups	298
4. The \mathcal{C} -notions on abelian groups	298
5. Perfectness and completeness	300
6. Applications of classes to fiber spaces	300
7. Applications to n -connective fiber spaces	304
8. The generalized Hurewicz theorem	305

9. The relative Hurewicz theorem	306
10. The Whitehead theorem	307
Exercises.	308
CHAPTER XI. HOMOTOPY GROUPS OF SPHERES	311
1. Introduction	311
2. The suspension theorem	311
3. The canonical map	313
4. Wang's isomorphism ρ_*	314
5. Relation between ρ_* and $i_{\#}$	315
6. The triad homotopy groups	316
7. Finiteness of higher homotopy groups of odd-dimensional spheres	317
8. The iterated suspension	318
9. The p -primary components of $\pi_m(S^3)$	319
10. Pseudo-projective spaces	321
11. Stiefel manifolds	323
12. Finiteness of higher homotopy groups of even-dimensional spheres	325
13. The p -primary components of homotopy groups of even-dimensional spheres	325
14. The Hopf invariant.	326
15. The groups $\pi_{n+1}(S^n)$ and $\pi_{n+2}(S^n)$	328
16. The groups $\pi_{n+3}(S^n)$	329
17. The groups $\pi_{n+4}(S^n)$	330
18. The groups $\pi_{n+r}(S^n)$, $5 \leq r \leq 15$	332
Exercises.	333
BIBLIOGRAPHY	337
INDEX	343
