

# Contents

<i>Chapter 1. Functions</i>	1
1. Variables and Functions. Intervals and Sequences	1
2. Absolute Values. Neighborhoods	9
3. Graphs and Tables	12
4. Some Simple Function Classes	14
5. Real Numbers and Decimal Expansions	21
<i>Chapter 2. Limits</i>	24
6. Basic Concepts	24
7. Algebraic Properties of Limits	32
8. Limits Relative to a Set. One-Sided Limits	37
9. Infinite Limits. Indeterminate Forms	43
10. Limits at Infinity	49
11. Limits of Sequences. The Greatest Lower Bound Property	53
12. The Bolzano-Weierstrass Theorem. The Cauchy Convergence Criterion	58
13. Limits of Monotonic Functions. The Function $a^x$ and the Number $e$	62
<i>Chapter 3. Continuity</i>	73
14. Continuous Functions	73
15. One-Sided Continuity. Classification of Discontinuities	79
16. The Intermediate Value Theorem. Absolute Extrema	83
17. Inverse Functions	89
18. Elementary Functions	92
19. Evaluation of Limits	101
20. Asymptotes	105
21. The Modulus of Continuity. Uniform Continuity	111
<i>Answers to Even-Numbered Problems</i>	116
<i>Index</i>	123
