

Introduction	IX
0. Notations, conventions and preliminary observations	
0.1 Spaces and maps	1
0.2 Homotopies	1
0.3 Categories and adjoint maps	2
0.4 Pullbacks, pushouts and Eckmann-Hilton duality	3
0.5 Ω -spectra, ring spectra, generalized cohomology	4
I. The category of H-spaces	
Introduction	8
1.1 Basic properties of H-spaces	9
1.2 Some special classes of H-spaces	19
1.3 The structure of $[, H\text{-space}]$	21
1.4 H-deviation and H-homotopy equivalence	25
1.5 Change of H-structures and H-maps	29
II. Homotopy properties of H-spaces	
Introduction	34
2.1 H-spaces and fibrations	36
2.2 H-liftings	37
2.3 Postnikov systems	42
2.4 Actions, H-actions and principal fibrations	47
2.5 H_A and H_C obstructions	58
2.6 Homotopy solvability and homotopy nilpotency	63

III. The cohomology of H-spaces

Introduction	69
3.1 The Hopf algebra $H^*(X, Z_p)$	70
3.2 Some relations between the algebra $H^*(X, Z_p)$ and the coalgebra $H^*(\Omega X, Z_p)$	73
3.3 Browder's Bockstein spectral sequence	84
3.4 High order operations	98

IV. Mod p theory of H-spaces

Introduction	113
4.1 p -equivalence and p -universal spaces	114
4.2 mod p -homotopy	124
4.3 Decomposition of 0-equivalences	128
4.4 A study of H_0 spaces	134
4.5 Mod \mathbb{F}_1 H-spaces	136
4.6 The genus of an H-space	147
4.7 Mixing homotopy types	152
4.8 The non classical H-spaces and other applications	157

V. Non stable BP resolutions

Introduction	163
5.1 Killing homology p -torsion	164
5.2 Wilson's $B(n, p)$'s	172

5.3	The groups $[, B(n,p)]$	176
5.4	H-maps into $B(n,p)$	181
5.5	Examples: Some properties of BU	187
5.6	Non stable BP Adams resolutions	190
5.7	Some simple applications	198
	Bibliography	211
	List of symbols	219
	Index of terminology	222
