

Contents

Prerequisites	1
-------------------------	---

Chapter I . Knots and Knot Types

1. Definition of a knot	3
2. Tame versus wild knots	5
3. Knot projections	6
4. Isotopy type, amphicheiral and invertible knots	8

Chapter II . The Fundamental Group

Introduction	13
1. Paths and loops	14
2. Classes of paths and loops	15
3. Change of basepoint	21
4. Induced homomorphisms of fundamental groups	22
5. Fundamental group of the circle	24

Chapter III . The Free Groups

Introduction	31
1. The free group $F[\mathcal{A}]$	31
2. Reduced words	32
3. Free groups	35

Chapter IV . Presentation of Groups

Introduction	37
1. Development of the presentation concept	37
2. Presentations and presentation types	39
3. The Tietze theorem	43
4. Word subgroups and the associated homomorphisms	47
5. Free abelian groups	50

Chapter V . Calculation of Fundamental Groups

Introduction	52
1. Retractions and deformations	54
2. Homotopy type	62
3. The van Kampen theorem	63

Chapter VI • Presentation of a Knot Group

Introduction	72
1. The over and under presentations	72
2. The over and under presentations, continued	78
3. The Wirtinger presentation	86
4. Examples of presentations	87
5. Existence of nontrivial knot types	90

Chapter VII • The Free Calculus and the Elementary Ideals

Introduction	94
1. The group ring	94
2. The free calculus	96
3. The Alexander matrix	100
4. The elementary ideals	101

Chapter VIII • The Knot Polynomials

Introduction	110
1. The abelianized knot group	111
2. The group ring of an infinite cyclic group	113
3. The knot polynomials	119
4. Knot types and knot polynomials	123

Chapter IX • Characteristic Properties of the Knot Polynomials

Introduction	134
1. Operation of the trivializer	134
2. Conjugation	136
3. Dual presentations	137

Appendix I. Differentiable Knots are Tame	147
---	-----

Appendix II. Categories and groupoids	153
---	-----

Appendix III. Proof of the van Kampen theorem	156
---	-----

Guide to the Literature	161
