

TABLE OF CONTENTS

Preface		vii
I. Introduction		
§1. Homotopy equivalence		1
§2. Whitehead's combinatorial approach to homotopy theory.		2
§3. CW complexes		4
II. A Geometric Approach to Homotopy Theory		
§4. Formal deformations		14
§5. Mapping cylinders and deformations		16
§6. The Whitehead group of a CW complex		20
§7. Simplifying a homotopically trivial CW pair		23
§8. Matrices and formal deformations		27
III. Algebra		
§9. Algebraic conventions		36
§10. The groups $K_G(\mathbb{R})$		37
§11. Some information about Whitehead groups		42
§12. Complexes with preferred bases [= (R,G)-complexes]		45
§13. Acyclic chain complexes		47
§14. Stable equivalence of acyclic chain complexes		50
§15. Definition of the torsion of an acyclic complex		52
§16. Milnor's definition of torsion		54
§17. Characterization of the torsion of a chain complex		56
§18. Changing rings		58
IV. Whitehead Torsion in the CW Category		
§19. The torsion of a CW pair - definition		62
§20. Fundamental properties of the torsion of a pair		67
§21. The natural equivalence of $Wh(L)$ and $\bigoplus Wh(\pi_1 L_j)$		70
§22. The torsion of a homotopy equivalence		72
§23. Product and sum theorems		76
§24. The relationship between homotopy and simple-homotopy		79
§25. Invariance of torsion, h-cobordisms and the Hauptvermutung		81
V. Lens Spaces		
§26. Definition of lens spaces		85
§27. The 3-dimensional spaces $L_{p,q}$		87
§28. Cell structures and homology groups		89
§29. Homotopy classification		91

§30. Simple-homotopy equivalence of lens spaces 97

§31. The complete classification 100

Appendix: Chapman's proof of the topological invariance of
Whitehead Torsion 102

Selected Symbols and Abbreviations 107

Bibliography 109
