

CONTENTS

Preface to the English edition	9
Information for the Reader	13

CHAPTER I

FUNDAMENTAL SET-THEORETICAL NOTIONS

§ 1. Sets	15
§ 2. Set-theoretical operations.	17
§ 3. Functions	22
§ 4. Real numbers. Sequences and series of real numbers	27
§ 5. Operations on functions	30
§ 6. Cartesian products	32
§ 7. Countable sets	35

CHAPTER II

FUNDAMENTAL GEOMETRIC AND ALGEBRAIC NOTIONS

§ 1. Points and vectors in Euclidean spaces	38
§ 2. Hyperplanes in Euclidean spaces	45
§ 3. Intervals	49
§ 4. Matrices	51
§ 5. Rectangular matrices	57
§ 6. Linear and multilinear forms. Forms of degree m	66
§ 7. The main types of mappings.	72
§ 8. Skew-symmetric forms.	78
§ 9. Skew-symmetric matrices	82
§ 10. Polyvectors.	90

CHAPTER III

FUNDAMENTAL TOPOLOGICAL NOTIONS

§ 1. Metric spaces	98
§ 2. Convergent sequences	101
§ 3. Closed and open sets	105
§ 4. Relativization.	109
§ 5. Separable spaces	110
§ 6. Compact sets	111
§ 7. The limit of a function at a point	113
§ 8. Continuous functions	115
§ 9. Convergence of sequences of functions	122
§ 10. Homeomorphism	124
§ 11. Connected sets	126

CHAPTER IV

DIFFERENTIATION OF REAL FUNCTIONS

§ 1. The directional derivative	129
§ 2. Partial derivatives	131
§ 3. The derivative. Functions of class C_1	135
§ 4. Derivatives of second order	142
§ 5. Derivatives of higher orders	147
§ 6. The Taylor formula	156
§ 7. Extrema of a function	160

CHAPTER V

DIFFERENTIABLE MAPPINGS

§ 1. The derivative of mapping, vector field and matrix field	166
§ 2. Derivatives of higher orders	176
§ 3. Differentiation of composite functions	180
§ 4. Systems of equations	188
§ 5. Regular mappings and vector fields. Diffeomorphisms	202
§ 6. Hypersurfaces.	209
§ 7. Extremal and critical points on hypersurfaces	226

CHAPTER VI

MEASURE THEORY

§ 1. Introduction	229
§ 2. Algebras of sets.	230
§ 3. Measure	234
§ 4. The volume of an interval.	238
§ 5. The outer measure	241
§ 6. Lebesgue-measurable sets. The Lebesgue measure	245
§ 7. A characterization of Lebesgue-measurable sets	250

CHAPTER VII

GENERAL THEORY OF THE INTEGRAL

§ 1. Introduction	256
§ 2. Measurable functions	257
§ 3. Simple functions	262
§ 4. The integral of a simple function.	264
§ 5. The general definition and fundamental properties of the integral	270
§ 6. Convergence theorems for the integral	279

CHAPTER VIII

THE INTEGRAL IN EUCLIDEAN SPACES

§ 1. Introduction. Integrals of continuous functions	284
§ 2. The Fubini theorem.	289
§ 3. A geometrical interpretation of the integral	297
§ 4. The reduction of multi-dimensional integrals to iterated integrals on one-dimensional intervals	300

§ 5. Integration by substitution	306
§ 6. Spherical coordinates. The measure of a ball	314
§ 7. Convolution	319
§ 8. The indefinite integral. The improper integral	323

CHAPTER IX

INTEGRALS ON HYPERSURFACES AND POLYHEDRA

§ 1. The k -dimensional measure on k -dimensional hypersurfaces.	327
§ 2. Functions of class C_m on a closed interval	338
§ 3. Faces of an interval.	343
§ 4. Cells	347
§ 5. Polyhedra	353
§ 6. The orientation of a cell	363
§ 7. Oriented cells. Chains	371
§ 8. The boundary of an oriented cell and of a chain	374
§ 9. Integrals on chains. Differential forms	388
§ 10. The skew derivative	394
§ 11. Stokes' theorem	400
§ 12. Integrals on oriented polyhedra	404
§ 13. Independence of the path of integration	416

CHAPTER X

SUPPLEMENTARY INFORMATION

§ 1. Linear spaces	421
§ 2. Calculus in Banach spaces	423
§ 3. Measures	427
§ 4. Homology group of a polyhedron.	429
§ 5. Homology group of an open set	432
§ 6. Differentiable manifolds	435
References	439
List of symbols	441
Subject index	451
