

TABLE OF CONTENTS.

CHAPTER.	PAGE.
I. POLYGONAL, PYRAMIDAL AND FIGURATE NUMBERS	1
II. LINEAR DIOPHANTINE EQUATIONS AND CONGRUENCES	41
Solution of $ax+by=c$	41
Solution of $ax \equiv b \pmod{m}$ without Fermat's theorem	54
Solution of $ax \equiv b \pmod{m}$ by Fermat's or Wilson's theorem	55
Chinese problem of remainders	57
Number of positive integral solutions of $ax+by=n$	64
One linear equation in three unknowns	71
One linear equation in $n > 3$ unknowns	73
System of linear equations	77
One linear congruence in two or more unknowns	86
System of linear congruences	88
Linear forms, approximation	93
III. PARTITIONS	101
IV. RATIONAL RIGHT TRIANGLES	165
Methods of solving $x^2+y^2=z^2$	165
Sides divisible by 3, 4, or 5	171
Number of right triangles with a given side	172
Right triangles of equal area	172
Right triangles whose areas have a given ratio	174
Other problems involving only area	175
Problems involving area and other elements	176
Right triangles whose legs differ by unity	181
Difference or sum of legs given	183
Two right triangles with equal differences of legs, and larger leg of one equal to hypotenuse of the other	184
Problems involving the sides, but not the area	186
Right triangles with a rational angle-bisector	188
Tables of right triangles with integral sides	189
V. TRIANGLES, QUADRILATERALS, AND TETRAHEDRA	191
Rational or Heron triangles	191
Pairs of rational triangles	201
Triangles whose sides and medians are all rational	202
Triangles with a rational median and rational sides, parallelograms with rational sides and diagonals	205
Heron triangles with a rational median, Heron parallelograms	207
Triangles with one or more rational angle-bisectors	209
Triangles with a linear relation between the angles	213
Triangles whose area need not be rational	214
Rational quadrilaterals	216
Rational inscribed polygons	221
Rational pyramids and trihedral angles	221
VI. SUM OF TWO SQUARES	225
VII. SUM OF THREE SQUARES	259
VIII. SUM OF FOUR SQUARES	275
IX. SUM OF n SQUARES	305
Representation as a sum of 5 or more squares	305
Relations between squares	318
X. NUMBER OF SOLUTIONS OF QUADRATIC CONGRUENCES IN n UNKNOWN	325
XI. LIOUVILLE'S SERIES OF EIGHTEEN ARTICLES	329
XII. PELL EQUATION; ax^2+bx+c MADE A SQUARE	341
XIII. FURTHER SINGLE EQUATIONS OF THE SECOND DEGREE	401
Equations linear in one unknown	401
Solution of $x^2-y^2=g$	402
Solution of $ax^2+bx+cy^2=dz^2$	404
Solution of $ax^2+by^2=c$	407
Solution of $ax^2+bx+cy^2=k$	408

	$Ax^2+2Bxy+Cy^2+2Dx+2Ey+F=0$	412
	$ax^2+by^2+cz^2=0$ (except $x^2+y^2=2z^2$)	419
	Further single quadratic equations in $n \geq 3$ unknowns	428
XIV.	SQUARES IN ARITHMETICAL OR GEOMETRICAL PROGRESSION	435
	Three squares in arithmetical progression	435
	Four squares in arithmetical progression	440
	Numbers in arithmetical progression all but one being squares	440
	Squares in geometrical progression	441
XV.	TWO OR MORE LINEAR FUNCTIONS MADE SQUARES	443
XVI.	TWO QUADRATIC FUNCTIONS OF ONE OR TWO UNKNOWNNS MADE SQUARES	459
	Congruent numbers; $x^2 \pm k$ both squares	459
	Concordant forms: x^2+my^2 , x^2+ny^2 both squares. Related problems	472
	x^2+y and $x+y^2$ both squares	478
	x^2+y^2-1 and x^2-y^2-1 both squares	479
	$x^2+2fxy+hy^2$ and $x^2+2gxy+ky^2$ both squares	480
	Two functions of one unknown made squares	482
	Other pairs of quadratic functions made squares	483
XVII.	SYSTEMS OF TWO EQUATIONS OF DEGREE TWO	485
	Two quadratic equations in two unknowns	485
	Problems of Heron and Planude; generalizations	485
	System $x=2y^2-1$, $x^2=2z^2-1$	487
	Number and its square both sums of 2 consecutive squares	488
	Miscellaneous systems of two equations	489
XVIII.	THREE OR MORE QUADRATIC FUNCTIONS OF ONE OR TWO UNKNOWNNS MADE SQUARES	491
	a^2x^2+dx , b^2x^2+ex , . . . made squares	491
	Three linear and quadratic functions of x , y made squares	492
	Four quadratic functions of x , y made squares	493
XIX.	SYSTEMS OF THREE OR MORE EQUATIONS OF DEGREE TWO IN THREE OR MORE UNKNOWNNS	497
	x^2+y^2 , x^2+z^2 , y^2+z^2 all squares	497
	Four squares whose sums by threes are squares	502
	Three squares whose differences are squares	505
	Three squares, sum of any two less third a square	507
	Further sets of three or more linear functions of three or more squares made squares	509
	Quadratic forms in x and y , x and z , y and z , made squares	511
	$xy+a$, $xz+a$, $yz+a$ all squares	513
	Problems related to the last one	515
	Product of any two of 4 or 5 numbers increased by 1 a square	517
	Product of any two of 4 numbers increased by n a square	519
	Other products of numbers in pairs increased by linear functions made squares	520
	Further equations whose quadratic terms are sums of products	522
	Squares increased by linear functions made squares	524
	Square of each of three numbers plus product of remaining two a square	526
	Miscellaneous systems of equations of degree two	527
	Rational orthogonal substitutions	530
XX.	QUADRATIC FORM MADE AN n TH POWER	533
	Binary quadratic form made a cube	533
	Binary quadratic form made an n th power	539
	$a_1x_1^2 + \dots + a_nx_n^2$ made a cube or higher power	543
XXI.	EQUATIONS OF DEGREE THREE	545
	Impossibility of $x^3+y^3=z^3$	545
	Two equal sums of two cubes	550
	Three equal sums of two cubes	561
	Solution of $2(x^3+x^3)=y^3+y^3$	562
	Relations between five or more cubes	563
	Sum of three cubes made a square	566
	Binary cubic form made a cube	566

	Binary cubic form made a square.....	569
	Numbers the sum of two rational cubes: $x^3 + y^3 = Az^3$	572
	Sum or difference of two cubes a square.....	578
	Sum of cubes of numbers in arithmetical progression a cube.....	582
	Sum of cubes of numbers in arithmetical progression a square.....	585
	Homogeneous cubic equation $F(x, y, z) = 0$	588
	Ternary cubic form made a constant.....	593
	Miscellaneous single equations of degree three.....	595
	Systems of equations of degree three in two unknowns.....	599
	Systems of equations of degree three in three unknowns.....	602
	To find n numbers the cube of whose sum increased (or decreased) by any one of them gives a cube.....	607
	Systems of equations of degree 3 in $n \geq 4$ unknowns.....	612
XXII. EQUATIONS OF DEGREE FOUR.....		615
	Sum or difference of two biquadrates never a square; area of a rational right triangle never a square.....	615
	$2x^4 - y^4 = \square$; right triangles whose hypotenuse and sum of legs are squares; $x^2 + y^2 = B^2$, $x + y = A^2$. Also, $x^4 - 2y^4 = \square$, $x^4 + 8y^4 = \square$	620
	$ax^4 + by^4 = cz^2$	627
	$ax^4 + by^4 + dx^2y^2$ made a square.....	634
	Quartic function made a square.....	639
	$A^4 + B^4 = C^4 + D^4$	644
	$A^4 + hB^4 = C^4 + hD^4$	647
	Sum of three biquadrates never a biquadrate.....	648
	Sum of four or more biquadrates a biquadrate.....	648
	Equal sums of biquadrates.....	653
	Relations involving both biquadrates and squares.....	657
	Miscellaneous single equations of degree four.....	660
	To find n numbers whose sum is a square and sum of squares is a biquadrate.....	665
	Miscellaneous systems of equations of degree four.....	667
XXIII. EQUATIONS OF DEGREE n		673
	Solution of $f = c$, where f is a binary form.....	673
	Conditions for an infinitude of solutions of $f(x, y) = 0$	674
	Rational points on the plane curve $f(x, y, z) = 0$	675
	Equations formed from linear functions.....	677
	Product of consecutive integers not an exact power.....	679
	Further properties of products of consecutive integers.....	680
	Sum of n th powers an n th power.....	682
	Two equal sums of n th powers.....	684
	Miscellaneous results on sums of like powers.....	684
	Rational solutions of $x^n = y^n$	687
	Product of factors $(x+1)/x$ equal to such a fraction.....	687
	Optic formula, $1/x_1 + \dots + 1/x_n = 1/a$	688
	Miscellaneous single equations of degree $n > 4$	691
	Miscellaneous systems of equations of degree $n > 4$	700
XXIV. SETS OF INTEGERS WITH EQUAL SUMS OF LIKE POWERS.....		705
	An equivalent problem in the theory of logarithms.....	714
XXV. WARING'S PROBLEM AND RELATED RESULTS.....		717
	Waring's problem.....	717
	Numbers expressible as sums of unlike powers.....	725
	Every number a sum of three rational cubes.....	726
	Every positive number a sum of 4 positive rational cubes.....	727
XXVI. FERMAT'S LAST THEOREM, $ax^r + by^r = cz^r$, AND THE CONGRUENCE $x^n + y^n \equiv z^n \pmod{p}$		731
AUTHOR INDEX.....		777
SUBJECT INDEX.....		799
