CHAPTER I

NUMBER

SECTIONS		PAGES
1	Introduction	1-3
2-4	Ordinal numbers	3-7
5	Mathematical induction	7-8
6, 7	Cardinal numbers	8-11
8-10	The operations on integral numbers	11-13
11-13	Fractional numbers	14-17
14, 15	Negative numbers, and the number zero	18-20
16, 17	Irrational numbers	20-22
18	Kronecker's scheme of arithmetization	22-23
19-22	The Dedekind theory of irrational numbers	23-27
23-28	The Cantor theory of irrational numbers	28-34
29	Convergent sequences of real numbers	35-37
30-32	The arithmetical theory of limits	37-40
33, 34	Equivalence of the definitions of Dedekind and Cantor	40-42
35	The non-existence of infinitesimals	42-43
36-38	The theory of indices	43-47
39, 40	The representation of real numbers	47-51
41, 42	The continuum of real numbers	51-54
43	The continuum given by intuition	54-55
44, 45	The straight line as a continuum	55-59

CHAPTER II

DESCRIPTIVE PROPERTIES OF SETS OF POINTS

46	Introduction	60-61
47, 48	The upper and lower boundaries of a linear set of points	61-64
49	Non-linear sets of points	64-65
50	Limiting point of a convergent sequence of intervals, or cells	65-67
51	Systems of nets	68-70
52-54	The limiting points and the derivatives of a set	70-75
55	Descriptive terminology	75-79
56	Properties of closed and open sets	79-81
57	Property of the successive derivatives of a set	81
58-60	Enumerable aggregates	81-86
61, 62	The power, or cardinal number, of an aggregate	86-88
63	The arithmetic continuum	88-91
64-66	Transfinite ordinal numbers	91-97
67	Properties of aggregates of closed sets	97-98
68	The transfinite derivatives of a set of points	98-100
69-72	Sets of intervals or cells	100-106
73-77	The Heine-Borel theorem	106-113
78, 79	The Lebesgue chain of intervals	114-116

SECTIONS		PAGES
80-83	Closed and perfect linear sets	116-124
84	Properties of the derivatives of linear sets	124-125
85-87	Closed sets in two or more dimensions	125-128
88-91	The analysis of sets in general	128-133
92	Inner and outer limiting sets	133-134
93-96	Sets of the first, and of the second, category	134-139
97-101	Ordinary inner limiting sets	139-146
102-113	Plane sets of points	146-157
114	The classification of a family of sets of points	157-158
115	Sets of sequences of integers	158-160

CHAPTER III

THE METRIC PROPERTIES OF SETS OF POINTS

116	Introduction	161
117-119	The content of a set of points	161-165
120	The problem of measure	165-166
121-123	The measures of open and closed sets	167-169
124, 125	The content or measure of a closed set	169-172
126, 127	The exterior and interior measures of a set	172-174
128-131	Measurable sets of points	174-179
132	Sets that are measurable (B)	179-180
133	Congruent sets	180-181
134	The measure of unbounded sets	181-182
135, 136	The measure of sets related to a system of sets	182-186
136 ¹	Vitali's theorem	186-190
137-140	The metric density of a set of points	190-196
141	The resolution of sets of points in accordance with metrical properties	196
142	Jordan's measure of a set of points	197
143	The sections of a closed set	197-200

CHAPTER IV

TRANSFINITE NUMBERS AND ORDER-TYPES

144	Introduction	201-202
145	The cardinal number of an aggregate	202-203
146, 147	The relative order of cardinal numbers	204-205
148, 149	The addition and multiplication of cardinal numbers	205-206
150	Cardinal numbers as exponents	206-207
151, 152	The smallest transfinite cardinal number	207-209
153-155	The equivalence theorem	209-213
156	Division of cardinal numbers by finite numbers	213-216
157	The order-type of simply ordered aggregates	216-217
158, 159	The addition and multiplication of order-types	217-218
160, 161	The structure of simply ordered aggregates	219-221
162-164	The order-types η , θ , π	221-224
165-168	Normally ordered aggregates	225-230
169-171	The theory of ordinal numbers	230-231
172-174	The ordinal numbers of the second class	232-235
175	The cardinal number of the second class of ordinals	235-236

SECTIONS	PAGES
176, 177 The general theory of aleph-numbers	236-238
178-180 The arithmetic of ordinal numbers of the second class	238-240
181 The theory of order-functions	240-242
182-186 The cardinal number of the continuum	242-249
187-193 General discussion of the theory	250-259
194-196 The paradoxes of Burali-Forti and Russell	259-262
197-200 The multiplicative axiom	262-267
201 Multiple correspondence	267
202 The normal ordering of an aggregate	267-268
203, 204 The comparability of aggregates	268-270

CHAPTER V

FUNCTIONS OF A REAL VARIABLE

205 Introduction	271-272
206, 207 The functional relation	272-277
208 Functions of a variable aggregate	277-278
209, 210 The upper and lower boundaries and limits of functions	278-281
211-213 The continuity of functions	281-286
214 Continuous functions defined for a continuous interval	286-287
215, 216 Continuous functions defined at points of a set	287-290
217 Uniform continuity	290-291
218 Absolute continuity	291-293
219 The continuity of unbounded functions	293-295
220-223 The limits of a function at a point	295-300
224-226 The discontinuities of functions	300-303
227 Ordinary discontinuities	304
228 The symmetry of functional limits	304-305
229 Functions continuous in an open interval	305-307
230-234 Semi-continuous functions	307-312
235 Approximate continuity	312-313
236, 237 The classification of discontinuous functions	313-316
238-240 Point-wise discontinuous functions	316-321
241, 242 Definition of point-wise discontinuous functions by extension	322-325
243-243 ¹ Functions of bounded variation	325-329
244 Function of bounded variation expressed as the difference of two monotone functions	329-330
245-248 Functions of bounded total fluctuation	331-337
249 Resolution of a function of bounded variation	337-338
250, 251 Rectifiable curves	338-341
252 The variation of a function of bounded variation over a linear set of points	341-342
253, 254 Functions of two variables that are of bounded variation	343-347
255 Quasi-monotone functions	347-348
256-258 The maxima, minima, and lines of invariability of continuous functions	348-352
259, 260 The derivatives of functions	352-356
261-268 The differential coefficients of continuous functions	356-367
269 Functions with lines of invariability	367-368
270-274 The successive differential coefficients of a continuous function	368-374

SECTIONS	PAGES
275, 276 Oscillating continuous functions	374-377
277, 278 Properties of incrementary ratios	377-379
279-285 Properties of the derivatives of continuous functions	380-386
286 Functions with one derivative assigned	386-387
287-290 The construction of continuous functions	387-391
291-300 General properties of derivatives	391-404
301 Functions of two variables	404-405
302-306 Double and repeated limits	405-414
307, 308 The limits of monotone and quasi-monotone functions of two variables	414-417
309, 310 Partial differential coefficients	417-422
311-315 Higher partial differential coefficients	422-432
316-319 Functions defined implicitly	432-443
320, 321 Maxima and minima of a function of two variables	444-446
322-324 Properties of a function continuous with respect to each variable	447-451
325-328 The representation of a square on a linear interval	451-458

CHAPTER VI

THE RIEMANN INTEGRAL

329 Introduction	459-460
330 The Riemann integral in a linear interval	460-461
331-334 The upper and lower Riemann integrals	462-468
335 Particular cases of functions that are integrable (<i>R</i>)	468-470
336 Geometrical interpretation of Riemann integration	470-472
337 Properties of the definite Riemann integral	472-476
338-340 <i>R</i> -integrals of functions of two or more variables	476-480
341, 342 Integrable null-functions and equivalent integrals	480-482
343-349 The fundamental theorem of the Integral Calculus	482-491
350 Functions which are linear in each interval of a set	491
351 Integration by parts	491-493
352, 353 Cauchy's definition of an improper integral	493-498
354-359 Riemann integrals over an unbounded interval	498-506
360, 361 Change of the variable in a single integral	506-509
362-365 Repeated integrals	509-518
366-368 Improper double integrals	518-526
369-371 The double integral over an infinite domain	527-531
372-375 The transformation of double integrals	531-538
376-376 ² The Riemann-Stieltjes integral	538-546
377-380 The generalized Riemann-Stieltjes integral	546-559
381 The Riemann-Stieltjes integral for functions of two variables	559-561

CHAPTER VII

THE LEBESGUE INTEGRAL

382 Introduction	562
383, 384 Measurable functions	562-564
385-388 The Lebesgue integral of a measurable function	565-572
389 Other definitions of an integral	572-573
390 The <i>L</i> -integral as the measure of a set of points	573-575

SECTIONS

	PAGES
391 The <i>R</i> -integral as an <i>L</i> -integral	575
392, 393 The Lebesgue integral as a function of a set of points	576-578
394 Equivalent <i>L</i> -integrals	578
395-399 Properties of the Lebesgue integral	579-584
400 The limits of a sequence of measurable functions	584-585
401-403 The derivatives of a function	585-587
404-409 Indefinite integrals	587-596
410-414 The fundamental theorem of the Integral Calculus for a Lebesgue integral	596-605
415 The total variation of an indefinite integral	605-606
416, 417 The generalized indefinite integral	607-608
418, 419 ³ The indefinite integral of a function of two variables	608-616
420 Integration by parts for the <i>L</i> -integral	616
421-426 Mean value theorems	616-626
427-429 Repeated Lebesgue integrals	626-632
430-433 A fundamental approximation theorem	632-640
434-436 Approximate representation of an <i>L</i> -integral as a Riemann sum	640-646
437-439 Lebesgue integrals over an infinite field	646-649
440-442 Change of the independent variable in a Lebesgue integral	649-656
443, 444 Harnack's definition of an integral	657-662
445-447 The Lebesgue-Stieltjes integral	662-666
448, 448 ¹ The <i>RS</i> -integral for functions of two variables	666-668
449-452 Hellinger's integrals	669-674

CHAPTER VIII

NON-ABSOLUTELY CONVERGENT INTEGRALS

453-455 Harnack-Lebesgue integrals	675-679
456 The <i>HL</i> -integral over a finite set of intervals	679-680
457-461 The conditions for the existence of an <i>HL</i> -integral	680-689
462 The second mean value theorem for an <i>HL</i> -integral	689-691
463 Integration by parts for the Harnack-Lebesgue integral	691
464-466 The Denjoy integral	692-699
467-471 The fundamental theorem of the Integral Calculus for the Denjoy integral	699-709
472-475 Properties of the Denjoy integral	709-715
476-478 Extensions of the definition of the Denjoy integral	715-719
479-482 The Young integral	719-726

CORRECTIONS AND ADDITIONS TO VOLUME II (1926)
