<i>Contents of Volumes I and II</i>	xxi

<b>Chapter 0 Algebraic Preliminaries</b>	<b>1</b>
--	----------

## PART 1

### Chapter I Spectral Sequences

1. Filtrations	19
2. Spectral sequences	25
3. Graded filtered differential spaces	31
4. Graded filtered differential algebras	45
5. Differential couples	48

### Chapter II Koszul Complexes of $P$ -Spaces and $P$ -Algebras

1. $P$ -spaces and $P$ -algebras	53
2. Isomorphism theorems	62
3. The Poincaré–Koszul series	67
4. Structure theorems	70
5. Symmetric $P$ -algebras	78
6. Essential $P$ -algebras	90

### Chapter III Koszul Complexes of $P$ -Differential Algebras

1. $P$ -differential algebras	95
2. Tensor difference	103
3. Isomorphism theorems	109
4. Structure theorems	114
5. Cohomology diagram of a tensor difference	126
6. Tensor difference with a symmetric $P$ -algebra	135
7. Equivalent and c-equivalent $(P, \delta)$ -algebras	147

## PART 2

**Chapter IV Lie Algebras and Differential Spaces**

- |    |   |     |
|----|---|-----|
| 1. | Lie algebras  | 157 |
| 2. | Representation of a Lie algebra in a differential space | 169 |

**Chapter V Cohomology of Lie Algebras and Lie Groups**

- |    |   |     |
|----|---|-----|
| 1. | Exterior algebra over a Lie algebra                 | 174 |
| 2. | Unimodular Lie algebras                             | 185 |
| 3. | Reductive Lie algebras                              | 188 |
| 4. | The structure theorem for $(\wedge E)_{\theta=0}$   | 193 |
| 5. | The structure of $(\wedge E^*)_{\theta=0}$          | 199 |
| 6. | Duality theorems                                    | 206 |
| 7. | Cohomology with coefficients in a graded Lie module | 210 |
| 8. | Applications to Lie groups                          | 215 |

**Chapter VI The Weil Algebra**

- |    |   |     |
|----|---|-----|
| 1. | The Weil algebra  | 223 |
| 2. | The canonical map $\rho_E$                                    | 231 |
| 3. | The distinguished transgression                               | 236 |
| 4. | The structure theorem for $(\vee E^*)_{\theta=0}$             | 241 |
| 5. | The structure theorem for $(\vee E)_{\theta=0}$ , and duality | 249 |
| 6. | Cohomology of the classical Lie algebras                      | 253 |
| 7. | The compact classical Lie groups                              | 264 |

**Chapter VII Operation of a Lie Algebra in a Graded Differential Algebra**

- |    |  |     |
|----|--|-----|
| 1. | Elementary properties of an operation                  | 273 |
| 2. | Examples of operations                                 | 278 |
| 3. | The structure homomorphism                             | 284 |
| 4. | Fibre projection                                       | 292 |
| 5. | Operation of a graded vector space on a graded algebra | 300 |
| 6. | Transformation groups                                  | 307 |

**Chapter VIII Algebraic Connections and Principal Bundles**

- |    |                                      |     |
|----|--------------------------------------|-----|
| 1. | Definition and examples              | 314 |
| 2. | The decomposition of $R$             | 319 |
| 3. | Geometric definition of an operation | 331 |
| 4. | The Weil homomorphism                | 340 |
| 5. | Principal bundles                    | 352 |

**Chapter IX Cohomology of Operations and Principal Bundles**

- |    |                                |     |
|----|--------------------------------|-----|
| 1. | The filtration of an operation | 359 |
| 2. | The fundamental theorem        | 363 |

3. Applications of the fundamental theorem	371
4. The distinguished transgression	378
5. The classification theorem	382
6. Principal bundles	390
7. Examples	397

## Chapter X Subalgebras

1. Operation of a subalgebra	411
2. The cohomology of $(\wedge E^*)_{i_F=0, \theta_F=0}$	420
3. The structure of the algebra $H(E/F)$	427
4. Cartan pairs	431
5. Subalgebras noncohomologous to zero	436
6. Equal rank pairs	442
7. Symmetric pairs	447
8. Relative Poincaré duality	450
9. Symplectic metrics	454

## Chapter XI Homogeneous Spaces

1. The cohomology of a homogeneous space	457
2. The structure of $H(G/K)$	462
3. The Weyl group	469
4. Examples of homogeneous spaces	474
5. Non-Cartan pairs	486

## Chapter XII Operation of a Lie Algebra Pair

1. Basic properties	498
2. The cohomology of $B_F$	509
3. Isomorphism of the cohomology diagrams	519
4. Applications of the fundamental theorem	526
5. Bundles with fibre a homogeneous space	540

## Appendix A Characteristic Coefficients and the Pfaffian

1. Characteristic and trace coefficients	547
2. Inner product spaces	554
