Contents†

Preface vii

Chapter 1 Homology Groups of a Simplicial Complex 1

§1 Simplices 2
§2 Simplicial Complexes and Simplicial Maps 7
§3 Abstract Simplicial Complexes 15
§4 Review of Abelian Groups 20
§5 Homology Groups 26
§6 Homology Groups of Surfaces 33
§7 Zero-dimensional Homology 41
§8 The Homology of a Cone 43
§9 Relative Homology 47
*§10 Homology with Arbitrary Coefficients 51
*§11 The Computability of Homology Groups 53
§12 Homomorphisms Induced by Simplicial Maps 62
§13 Chain Complexes and Acyclic Carriers 71

Chapter 2 Topological Invariance of the Homology Groups 79

§14 Simplicial Approximations 80
§15 Barycentric Subdivision 83

†The sections marked with an asterisk can be omitted or postponed until needed. Chapter 2 can be omitted.

§16 The Simplicial Approximation Theorem 89
§17 The Algebra of Subdivision 95
§18 Topological Invariance of the Homology Groups 100
§19 Homomorphisms Induced by Homotopic Maps 103
§20 Review of Quotient Spaces 111
*§21 Application: Maps of Spheres 116
*§22 Application: The Lefschetz Fixed-point Theorem 121

Chapter 3 Relative Homology and the Eilenberg-Steenrod Axioms 129

§23 The Exact Homology Sequence 129
§24 The Zig-zag Lemma 136
§25 Mayer-Vietoris Sequences 142
§26 The Eilenberg-Steenrod Axioms 145
§27 The Axioms for Simplicial Theory 149
*§28 Categories and Functors 154

Chapter 4 Singular Homology Theory 161

§29 The Singular Homology Groups 162
§30 The Axioms for Singular Theory 168
§31 Excision in Singular Homology 175
*§32 Acyclic Models 183
§33 Mayer-Vietoris Sequences 186
§34 The Isomorphism Between Simplicial and Singular Homology 190
*§35 Application: Local Homology Groups and Manifolds 196
*§36 Application: The Jordan Curve Theorem 202
§37 More on Quotient Spaces 209
§38 CW Complexes 214
§39 The Homology of CW Complexes 222
*§40 Application: Projective Spaces and Lens Spaces 231

Chapter 5 Cohomology 245

§41 The Hom Functor 245
§42 Simplicial Cohomology Groups 251
§43 Relative Cohomology 257
§44 Cohomology Theory 262
§45 The Cohomology of Free Chain Complexes 270

*§46 Chain Equivalences in Free Chain Complexes 279
§47 The Cohomology of CW Complexes 281
§48 Cup Products 285
§49 Cohomology Rings of Surfaces 292

Chapter 6 Homology with Coefficients 299

§50 Tensor Products 299
§51 Homology with Arbitrary Coefficients 307

Chapter 7 Homological Algebra 313

§52 The Ext Functor 314
§53 The Universal Coefficient Theorem for Cohomology 320
§54 Torsion Products 327
§55 The Universal Coefficient Theorem for Homology 332
*§56 Other Universal Coefficient Theorems 334
§57 Tensor Products of Chain Complexes 338
§58 The Künneth Theorem 341
§59 The Eilenberg-Zilber Theorem 350
*§60 The Künneth Theorem for Cohomology 353
*§61 Application: The Cohomology Ring of a Product Space 360

Chapter 8 Duality in Manifolds 367

§62 The Join of Two Complexes 368
§63 Homology Manifolds 374
§64 The Dual Block Complex 377
§65 Poincaré Duality 382
§66 Cap Products 388
§67 A Second Proof of Poincaré Duality 394
*§68 Application: Cohomology Rings of Manifolds 399
*§69 Application: Homotopy Classification of Lens Spaces 408
§70 Lefschetz Duality 414
§71 Alexander Duality 424
§72 "Natural" Versions of Lefschetz and Alexander Duality 426
§73 Čech Cohomology 433
§74 Alexander-Pontryagin Duality 445

Bibliography 447
