

# TABLE OF CONTENTS

Preface	vii
Introduction	
Algebraic Independence of Values of Exponential and Elliptic Functions	1
Chapter 1	
Some Analytic Methods in the Theory of Transcendental Numbers	27
Chapter 2	
Baker's Method in the Theory of Transcendental Numbers	123
Chapter 3	
On the Way to Schanuel's Conjecture	145
Chapter 4	
Criteria of Algebraic Independence of Several Numbers	177
Chapter 5	
Methods of the Theory of Transcendental Numbers, Diophantine Approximations and Solutions of Diophantine Equations	217
Chapter 6	
Some Diophantine Problems	265
Chapter 7	
Transcendences Arising from Exponential and Elliptic Functions	297
Chapter 8	
Measure of the Algebraic Independence of Periods and Quasi-Periods of Elliptic Curves	355
Chapter 9	
Another Method for Investigating the Arithmetic Nature of Values of Functions of a Complex Variable	383
Appendix	
The Proof of Extremality of Certain Manifolds By A. I. Vinogradov and G. V. Chudnovsky	421
Index	449
