Contents

	Preface	*page* ix
1	**Preview: Quadratic forms and modular functions**	1
	Exercise	5
	Bibliographic note	5
2	**Early versions of class field theory**	6
	2.1 Rational definition of class field	6
	2.2 Class fields for quadratic forms	13
	2.3 Dirichlet characters	17
	2.4 Appendix on rational number theory	19
	Exercises	22
	Bibliographic note	23
3	**Interpretation by rings and ideals**	24
	3.1 Rings and modules	24
	3.2 Ideals and divisors	30
	3.3 Ideals as homomorphisms	34
	Exercises	36
	Bibliographic note	38
4	**Finite invariants of a field**	39
	4.1 Integers and discriminants	40
	4.2 Units and regulators	45
	4.3 The zeta-function and L-functions	49
	Exercises	54
	Bibliographic note	57
5	**Function fields**	58
	5.1 Rational functions	58
	5.2 Riemann surfaces	64

5.3 Elliptic functions 69
5.4 Integer rings 75
Exercises 77
Bibliographic note 78

6 Relative fields 79
6.1 Discriminant and different 80
6.2 Hilbert sequence of fields and groups 83
6.3 Classical illustrations 89
6.4 The Artin symbol 92
Exercises 94
Bibliographic note 95

7 The WHAT theorem of class field theory 96
7.1 The two class field concepts 97
7.2 Ray class structure 99
7.3 The conductor 102
7.4 The WHAT theorem summarized 103
7.5 Analytic class field theory 107
Exercises 110
Bibliographic note 111

8 The genus class field and transfer theory 112
8.1 Ring class structure and genus 113
8.2 Absolute Galois structures 117
8.3 Class transfer theory 122
Exercises 128
Bibliographic note 131

9 Class fields by radicals 132
9.1 An unramified class field tower 132
9.2 A ramified tower 138
9.3 Hilbert's relative units 143
9.4 The governing field 147
Exercises 151
Bibliographic note 151

10 The modular function field 153
10.1 Summation formulas 154
10.2 Special matrix and transformation groups 160
10.3 Modular fields and subfields 164
10.4 Modular equations 170
Exercises 175
Bibliographic note 177

11 Class fields by modular functions 178
11.1 Modular invariants 178
11.2 Weber's theorem 184
11.3 Iteration and the icosahedron 189
11.4 Epilogue to Weber's theorem 202
Exercises 204
Bibliographic note 205
References 206
Index 211
