

# Contents

**Preface**   vii

**Preliminaries and notation**   ix

**§1. Stokes' theorem in the plane**   1

- 1.1. Proof of Stokes' theorem in the plane   1
- 1.2. Looking towards generalizations   6

**§2. Basic concepts**   8

- 2.1. The objects to be integrated: alternating multilinear differential forms   8
  - 2.1.A. Notation. Exposition of the problem   8
  - B. The content of a parallelotop   10
  - C. Orientation   12
  - D. Orientation of the boundary of an oriented parallelotop   13
  - E. Alternating linear forms in  $\mathcal{V}^{(n)}$    15
  - F. Decomposition of a  $k$ -form into components   18
  - G.  $C^1$ -mappings from  $\mathbb{R}^n$  to  $\mathbb{R}^k$ . Alternating multilinear differential forms in  $\mathbb{R}^n$    21
- 2.2. Domains of integration: smooth pieces of space in  $\mathbb{R}^n$  with almost smooth boundary   24
  - 2.2.A. Almost smooth pieces of space and their content   24
  - B. The tangential spaces of an almost smooth piece   27
  - C. Smooth pieces of space with almost smooth boundary   29
  - D. Oriented pieces of space   31
  - E. Orientation of the boundary of an oriented piece of space   32
- 2.3. Integrals and differential of a differential form   33
  - 2.3.A. The integral of a  $k$ -form in  $\mathbb{R}^n$  over an oriented  $k$ -dimensional piece. The pullback of a form   33
  - B. Forms defined on a  $k$ -dimensional piece in  $\mathbb{R}^n$  and their integrals   36

- 2.3.C. The integral of a  $(k-1)$ -form over the boundary of a  $k$ -dimensional piece 38
- D. The differential of a  $(k-1)$ -form 39
- E. Rolle's lemma and the mean-value theorem for differential forms 44
- F. Approximation of integrals by polytopal approximation of the domains of integration 46

### §3. Stokes' theorem for pieces of space 54

- 3.1. A preliminary form of Stokes' theorem and Poincaré's lemma 54
- 3.2. Stokes' theorem for  $k$ -dimensional pieces in  $\mathbb{R}^k$  55
  - 3.2.A. A lemma 55
  - B. Proof of Stokes' theorem for a  $k$ -dimensional piece in  $\mathbb{R}^k$  58
  - C. Inferences 60
  - D. Gauss' divergence theorem 61
- 3.3. Stokes' theorem for a  $k$ -dimensional piece  $P_n^{(k)}$  in  $\mathbb{R}^n$  63
  - 3.3.A.  $\omega$  defined on  $N_n^{(k)} \supset P_n^{(k)}$  63
  - B.  $\omega$  defined in  $D^{(n)} \supset P_n^{(k)}$  64
  - C. Inferences 70

### §4. The calculus of alternating multilinear forms 72

- 4.1. The exterior product of alternating forms 72
- 4.2. The differential of a differential form 76
- 4.3. The pullback in the calculus of differential forms 79

### §5. Stokes' theorem on manifolds 82

- 5.1. The concept of manifold 82
  - 5.1.A. Manifolds in a Cartesian space 82
  - B. Abstract manifolds 85
  - C. Submanifolds 89
  - D. Oriented manifolds 92
- 5.2. Differential forms on a manifold and their integrals 93
- 5.3. Stokes' theorem on a manifold 97
  - 5.3.A. Proof of the theorem 97
  - B. A result for exact forms 98

### Solutions of the exercises 101
