

TABLE OF CONTENTS

	Page
Introduction	xi
Chapter I	Preliminaries 1
§1	Locally free modules and locally freely presented torsion modules 1
§2	Determinants and the Hom language for classgroups 5
§3	Supplement at infinity 18
Chapter II	Involution algebras and the Hermitian classgroup 20
§1	Involution algebras and duality 20
§2	Hermitian modules 25
§3	Pfaffians of matrices 27
§4	Pfaffians of algebras 33
§5	Discriminants and the Hermitian classgroup 43
§6	Some homomorphisms 56
§7	Pulling back discriminants 69
§8	Unimodular modules 72
§8	Products 76
Chapter III	Indecomposable involution algebras 78
§1	Dictionary 78
§2	The map \underline{P} 84
§3	Discriminants once more 94
§4	Norms of automorphisms 103
§5	Unimodular classes once more 106

		Page
Chapter IV	Change of order	117
	§1 Going up	117
	§2 Going down	124
Chapter V	Groups	146
	§1 Characters	146
	§2 Character action. Ordinary theory	155
	§3 Character action. Hermitian theory	163
	§4 Special formulae	173
	§5 Special properties of the group ring involution	177
	§6 Some Frobenius modules	178
	§7 Some subgroups of the adelic Hermitian classgroup	189
Chapter VI	Applications in arithmetic	198
	§1 Local theory	199
	§2 The global discriminant	215
	Literature	221
	List of Theorems	224
	Some further notation	225
	Index	226
