

# CONTENTS

	Introduction	1
	Glossary	13
§1	Fake $\mathbb{R}^4$	17
	Differentiable structures	17
	Topological 4-manifolds	19
	Differentiable 4-manifolds	23
	A surgical failure	25
§2	The Yang-Mills Equations	31
	Connections	32
	Topological quantum numbers	37
	The Yang-Mills functional	39
	Line bundles	43
	Donaldson's Theorem	45
§3	Manifolds of Connections	51
	Sobolev spaces	52
	Reducible connections	54
	A slice theorem	56
	The parametrized moduli space	60
	The moduli space	69
§4	Cones on $\mathbb{C}\mathbb{P}^2$	74
	Slices again	75
	Structure of the singular point	77
	Perturbing the metric	82
§5	Orientability	88
	Index bundles	89
	Components of $\mathcal{M}$	92
	The element $-1$	96
§6	Introduction to Taubes' Theorem	99
	Instantons on $S^4$	100
	A grafting procedure	105
	Tools from analysis	110
	Analytic properties of SDYME	116

§7	Taubes Theorem	119
	Blowing up the metric	121
	The eigenvalue estimate	128
	The linearized equation	132
	Taubes' projection	137
§8	Compactness	141
	Compactness and regularity	142
	Measuring concentrated curvature	149
	Compactness in $\mathcal{M}$	158
§9	The Collar Theorem	162
	Decay estimates	163
	Conformal deformations	170
	Exponential gauges	178
	Connectivity of the collar	183
§10	The Technique of Fintushel and Stern	188
	The moduli space for $SO(3)$ bundles	188
	Reducible connections	192
	Analytic details	194
Appendix A	The Group of Sobolev Gauge Transformations	196
Appendix B	The Pontrjagin-Thom Construction	201
Appendix C	Weitzenböck Formulas	206
Appendix D	The Removability of Singularities	214
Appendix E	Topological Remarks	217
	BIBLIOGRAPHY	226
